THE LUXE

Mario Builder Spec

with UX / UI Mockup Slots

CONFIDENTIAL

Prepared by Harmonie Joy Willis · For Mario, Systems Architect

August 6, 2026

A Guide for the Build

Hey Mario — I'm excited about this one. I hope it makes things a lot clearer for the build. It's time to get into the nitty gritty and actually start building.

How this deck works: each numbered page has the spec on the left and a mockup box on the right, once the real design is ready. The front section walks through the overall architecture and the Build → Scale → Automate roadmap before the pages start. After Page 15, a divider marks the shift into the back section — later phases, open questions, and next steps.

IN THIS DECK

- THE LUXE overview
- Phase 1 — 15 pages
- 2 candidate pages
- Later phases
- Open decisions
- Next actions

💡 *The open decisions near the end are not meeting-blockers. The main goal for our first session is simply getting these pages down and clearly understood. The open decisions are real and shouldn't be forgotten — but they're worked through over time, not all in one sitting.*

THE LUXE

An AI-powered operating system for people whose ideas grow faster than their systems — it organizes, protects, and executes their voice and their work, without becoming the author of either.

Before anything else, here's how THE LUXE fits together — three levels, so it's clear where everything belongs and why. It's a platform, not a set of separate, equal products side by side.

1

THE LUXE itself

The whole ecosystem. A shared intelligence layer — Creator DNA, Rooms, memory, workflows — that every application underneath draws from.

2

Applications built on top of that foundation

Creator/CEO (our current focus, name still TBD), EDU, Studio, Teams, and more not yet named. Each one taps into that same shared intelligence rather than having its own separate copy — the same pattern platforms like Microsoft, Salesforce, and Adobe use: one intelligence layer underneath, many applications built on top of it.

3

Where we're actually zooming in right now

Just one of those applications, Creator/CEO. Build→

Scale → Automate is that one application's internal roadmap — not a split in the ecosystem itself.

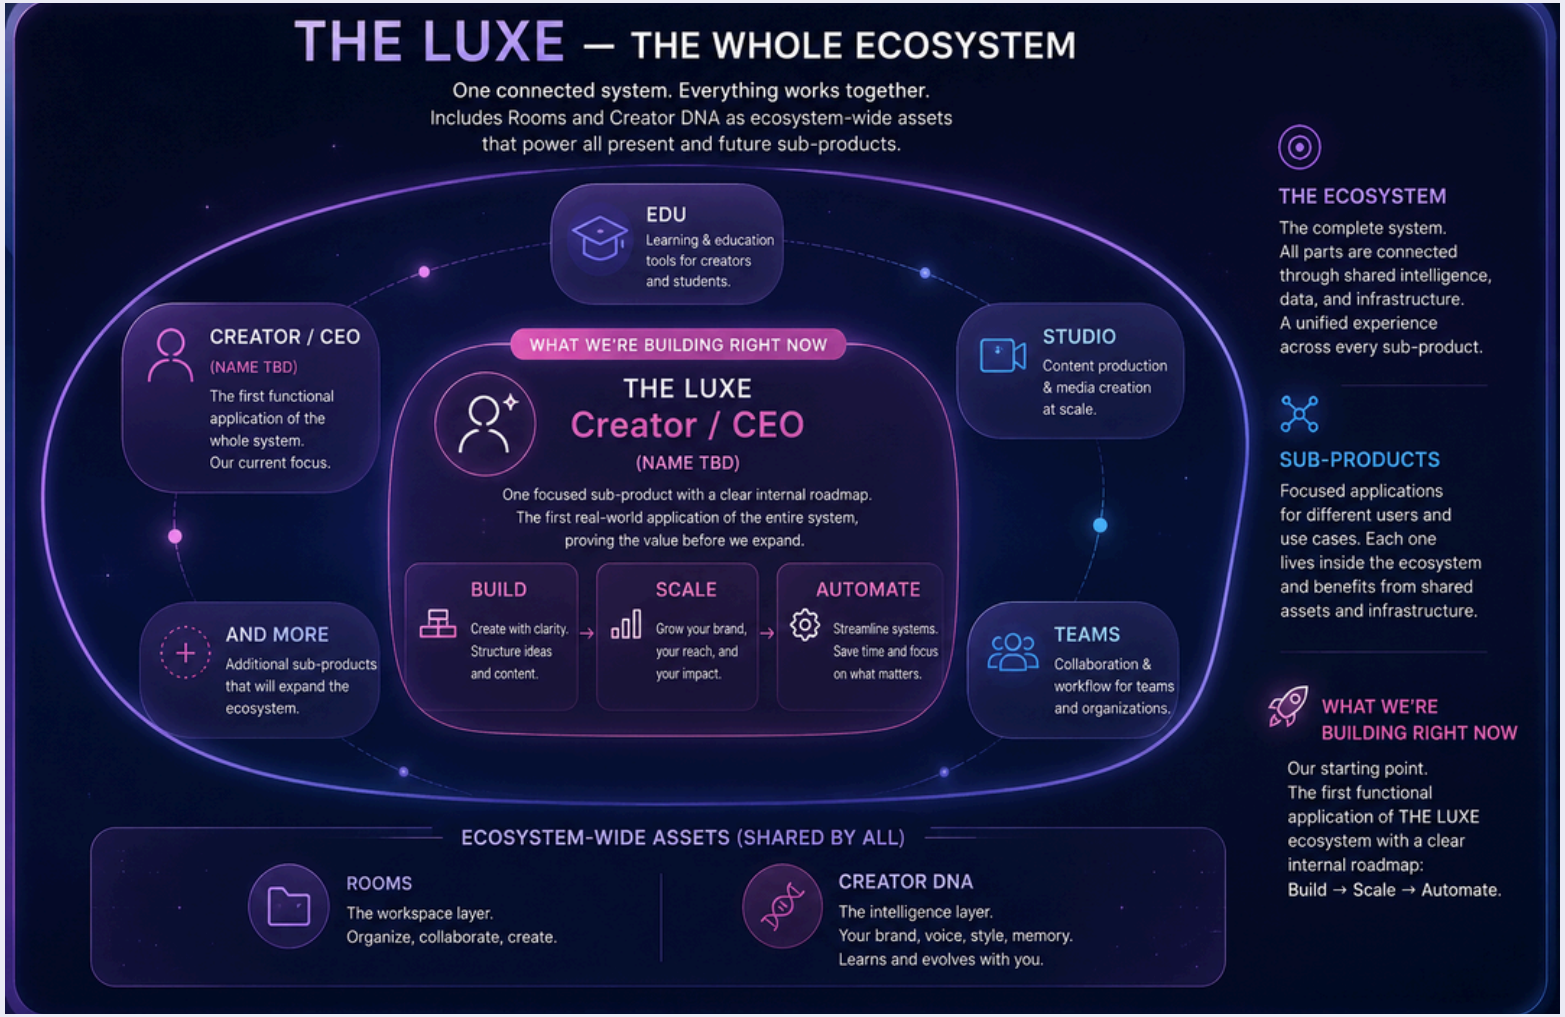
WORKING TITLE

THE LUXE Creator

THE LUXE Creator (working title) is the first functional application built on top of THE LUXE ecosystem. Instead of building separate products from scratch, every future application will share the same intelligence, infrastructure, memory, workflows, and Creator DNA.

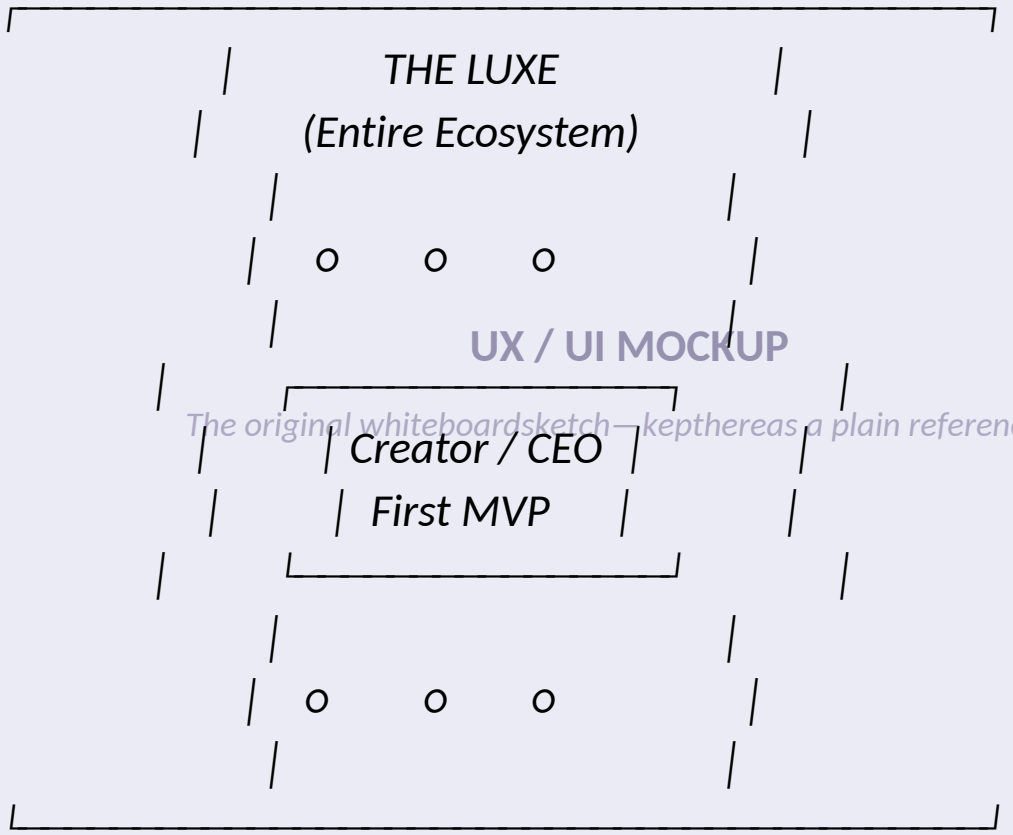
REFERENCE

The Architecture, Visually



WHERE THIS STRUCTURE CAME FROM

The Original Sketch



The original whiteboardsketch—keptthereas a plain reference

Phase Naming: Build → Scale → Automate

For our first MVP, the focus is THE LUXE Creator/CEO — the one application from Level 3. Build, Scale, and Automate are simply the three internal stages that application goes through, in order:

BUILD

Identity andbrand positioning→ Creator DNA. Foundation, first, non-negotiable.

SCALE

Content loops,conversion structure → the content workspace: gallery, campaign/project organization, platform-specific publishing. Phase 1's actual center of gravity.

AUTOMATE

Sustainability — consistent output, growth, and revenue, run as a functional partner rather than manual effort → the ceremony/orchestration layer, including milestones and reminders.

Validated independently: Harmonie's own consulting Blueprint package ($1,800–2,200) already sells almost exactly this Phase 1 scope, sold manually before any software existed.

THE LUXE CREATOR

ROADMAP OVERVIEW

From learning the creator to executing with ease — and scaling into the future.

PHASE 1 · BUILD THE FOUNDATION

Goal: Build the first usable version of THE LUXE Creator.

1 Foundation

Learn the Creator

Understand the creator, their brand, voice, and content ecosystem. This is the foundation that powers everything.

2 Orchestration

Connect Everything

Transform scattered information into one intelligent workspace. THE LUXE organizes, connects, and prepares everything for creation.

3 Execution

Create with Context

The creator's daily workspace. Plan, create, edit, publish, and analyze — all with full context and brand integrity.

PHASE 1 MVP

Everything in Phase 1 is part of the first MVP. We build in this order.

PHASE 2 SCALE

Expand the workspace and capabilities.

- Campaign Manager
- Website Builder
- Advanced Projects
- Knowledge Hub
- Team Collaboration
- Brand Portals
- Advanced Analytics

PHASE 3 AUTOMATE

Automate workflows and intelligence.

- AI Agents
- Workflow Automations
- Smart Suggestions
- Predictive Planning
- Dynamic Content System
- Advanced Reporting
- API & Integrations

FUTURE APPLICATIONS

Extend THE LUXE beyond the creator.

- THE LUXE EDU
- THE LUXE Studio
- THE LUXE Teams
- THE LUXE Enterprise
- Marketplace
- Partner Ecosystem
- More to come...

THE BIG PICTURE

Phase 1 builds the foundation and core experience.
Phase 2 expands our capabilities and user impact.
Phase 3 introduces automation and AI intelligence.
Future applications extend THE LUXE into new industries and use cases.

SUCCESS VISION

Creators spend less time managing tools and more time creating impact.
Everything connected. Everything intelligent.
Everything in flow.

Phase 1

The first real, sellable version—fifteenpages,onefocused thing at a time

Phase 1

Building the Foundation

The following screens represent the first buildable version of THE LUXE Creator.
Rather than building every future capability at once, Phase 1 focuses on creating the smallest valuable product that allows creators to organize their work, establish their foundation, and begin creating inside one intelligent workspace.

PAGE 1 Welcome / Home

PHASE 1 — SIMPLE VERSION

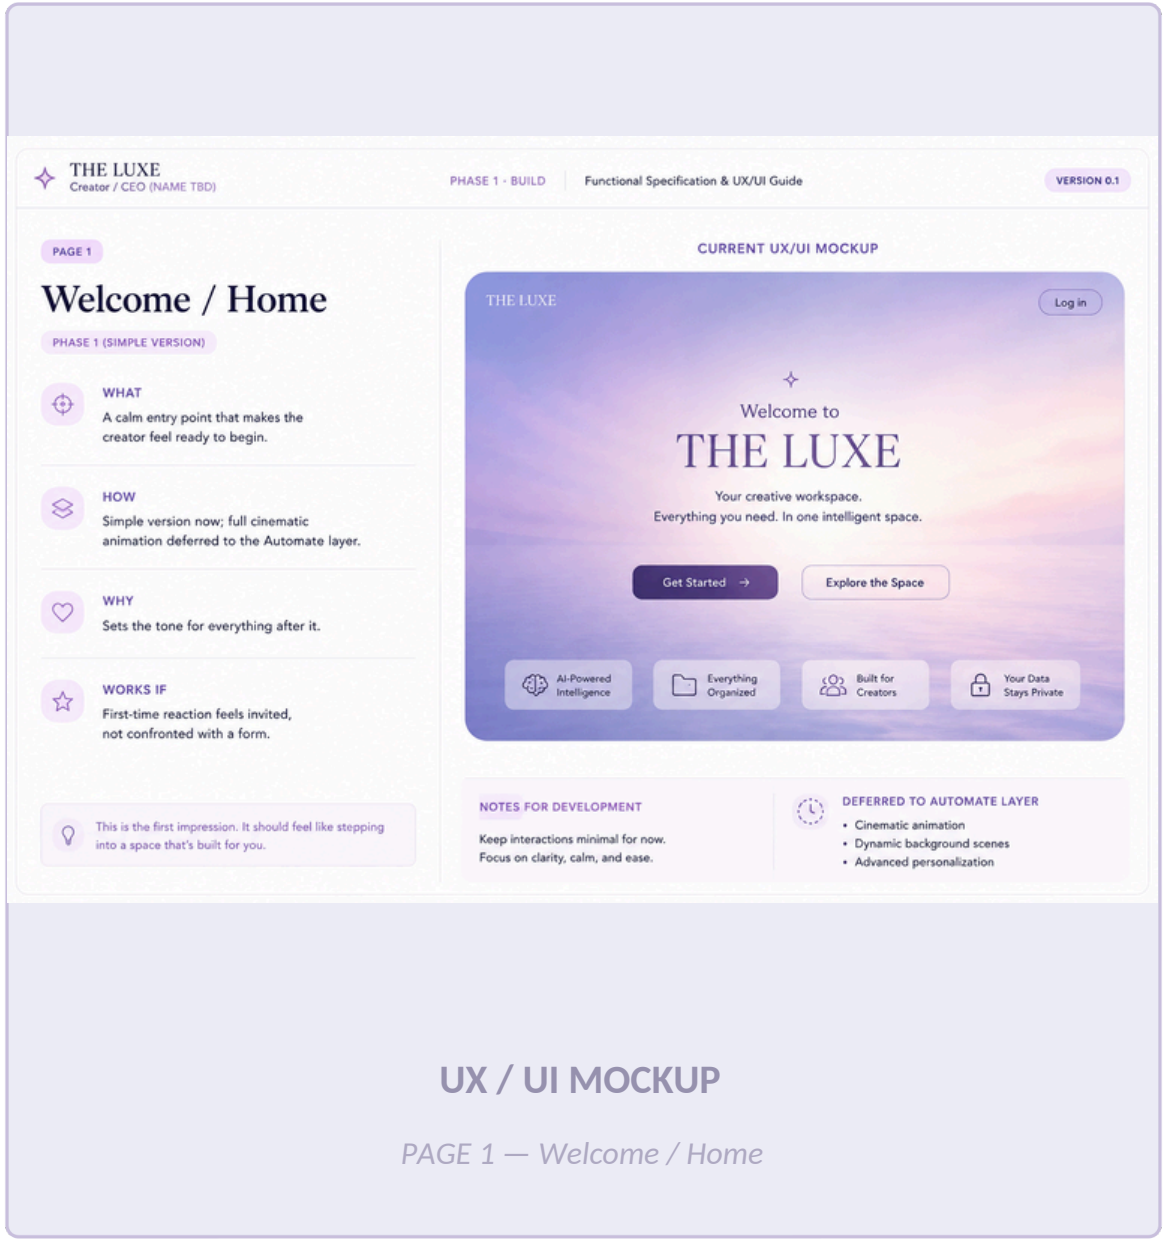
What: A calm entry point that makes the creator feel ready to begin.

How: Simple version now; full cinematic animation deferred to the Automate layer.

Why: Sets the tone for everything after it.

Works if: First-time reaction feels invited, not confronted with a form.

💡 *Iftime allows: "Are you ready to build your content journey?" with the three Build/Scale/Automate bubbles appearing one at a time, and a line like "a sustainable system that reflects you." Doesn't change anything above — optional, and simplified or skipped if time is tight. Gives the creator a small guided visual moment right from the start. Later, this becomes the full world-building animation.*



UX / UI MOCKUP

PAGE 1 — Welcome / Home

PAGE 2 Discover Me

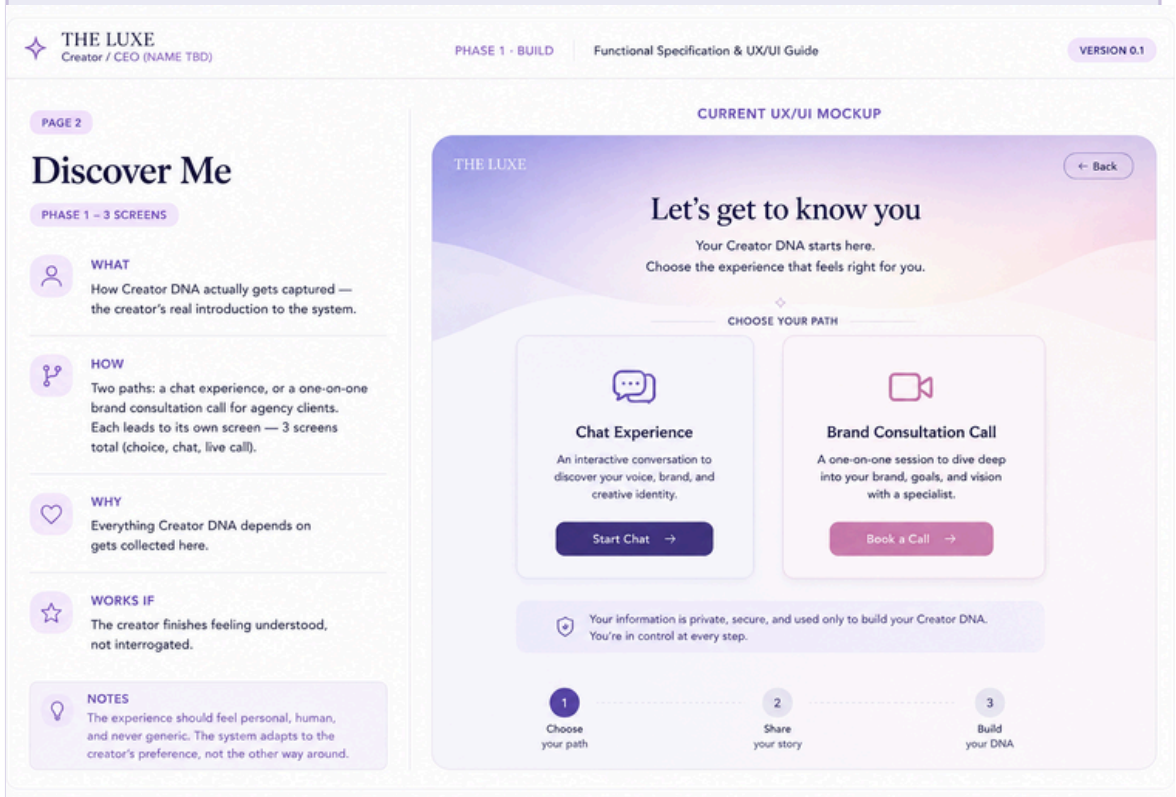
PHASE 1

What: How Creator DNA actually gets captured — the creator's real introduction to the system.

How: A main screen offering two paths: a chat experience, or, for agency clients, a one-on-one brand consultation call. Each path leads to its own screen — three screens total for this page.

Why: This is where everything Creator DNA depends on actually gets collected.

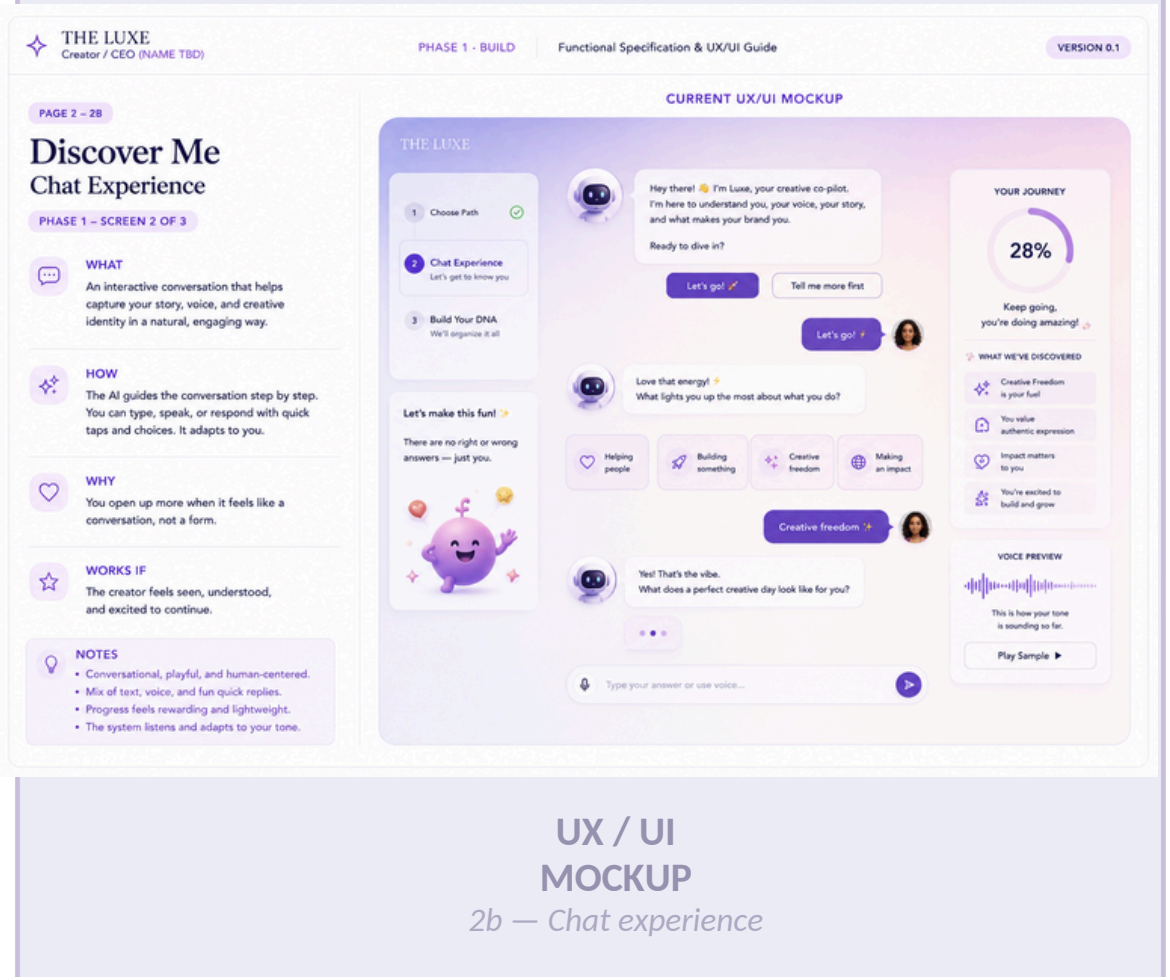
Works if: The creator finishes it feeling understood, not interrogated.



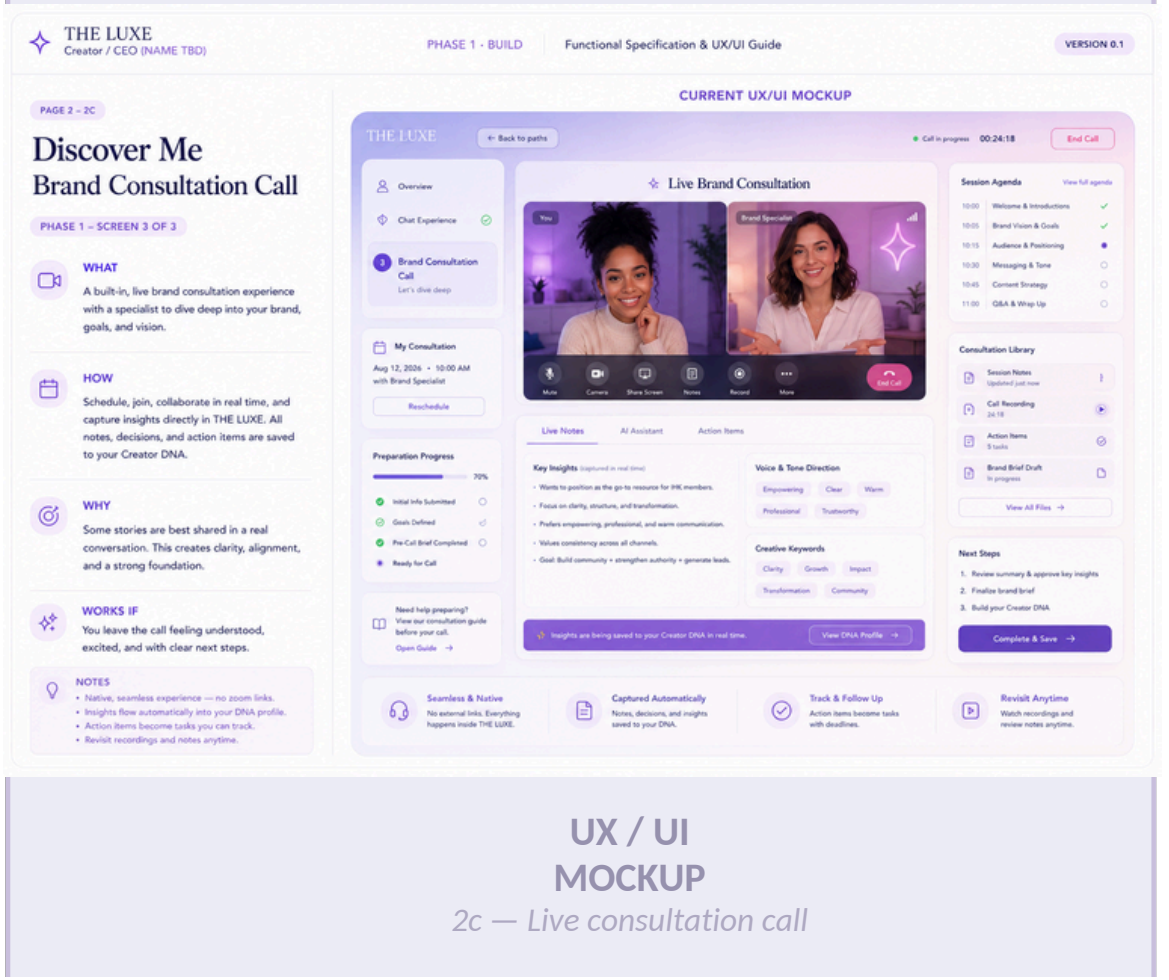
UX / UI MOCKUP

PAGE 2 — Discover Me

Discover Me —2b+2c



UX / UI
MOCKUP
2b — Chat experience



UX / UI
MOCKUP
2c — Live consultation call

PAGE 3 Creator DNA (profile)

PHASE 1

What: A person's identity — tone, values, creative style, strengths, north star — as a reusable profile everything else reads from.

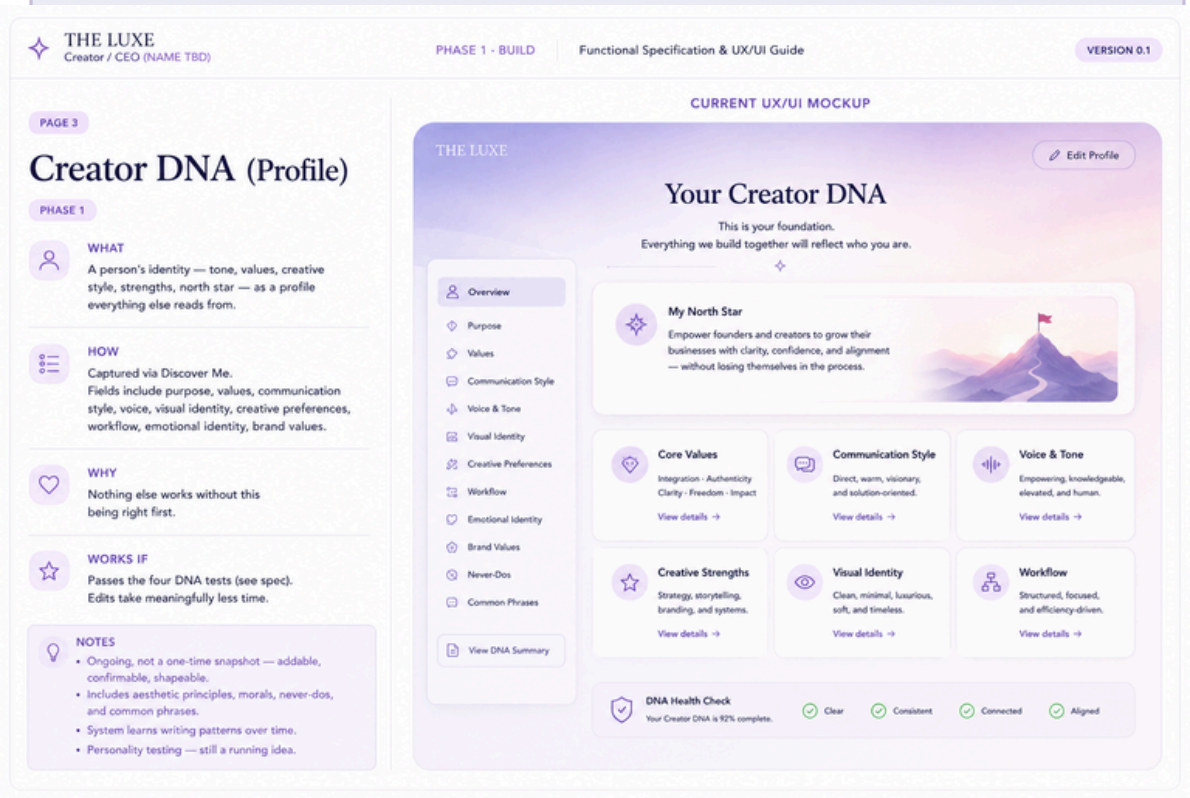
How: Captured through Discover Me (Page 2). Fields: purpose, values, communication style, voice, visual identity, creative preferences, workflow, emotional identity, and brand values.

Why: Nothing else works without this being right first.

Works if: Passes the four tests (self-recognition, reduced-correction, blind-prediction, historical-match) — detailed further down. Also works when edits take meaningfully less time, because the DNA is already accurate, not just when the profile itself feels right.

💡 *The DNA isn't a one-time snapshot — it should be addable,confirmable, and shapeable on an ongoing basis. Also add: aesthetic/style principles, morals, never-dos, and common phrases. The system should notice actual writing patterns over time and build its suggestions from them.*

💡 *Personality testing — still just a running idea worth considering, not a decided feature. Something that could enrich the DNA over time (e.g. one question a day), not something confirmed to build.*



UX / UI MOCKUP

PAGE 3 — Creator DNA (profile)

PAGE 4 Brand Kit Guide

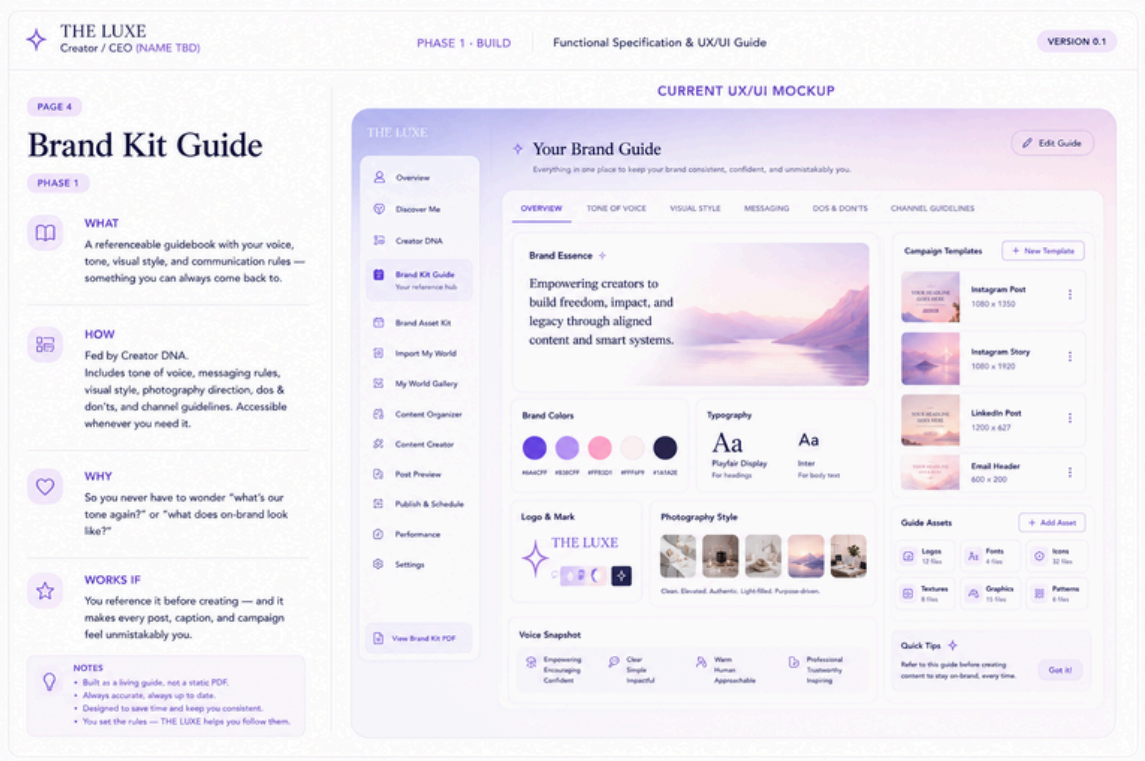
PHASE 1

What: A referenceable guidebook — tone, photography style, do's/don'ts — the creator can revisit anytime.

How: Fed BY Creator DNA, not merged into it. Its own accessible portal, per Sandra's direct request.

Why: She asked for this specifically as something to check back against, separate from active work.

Works if: She references it without needing to ask what the rule was again.

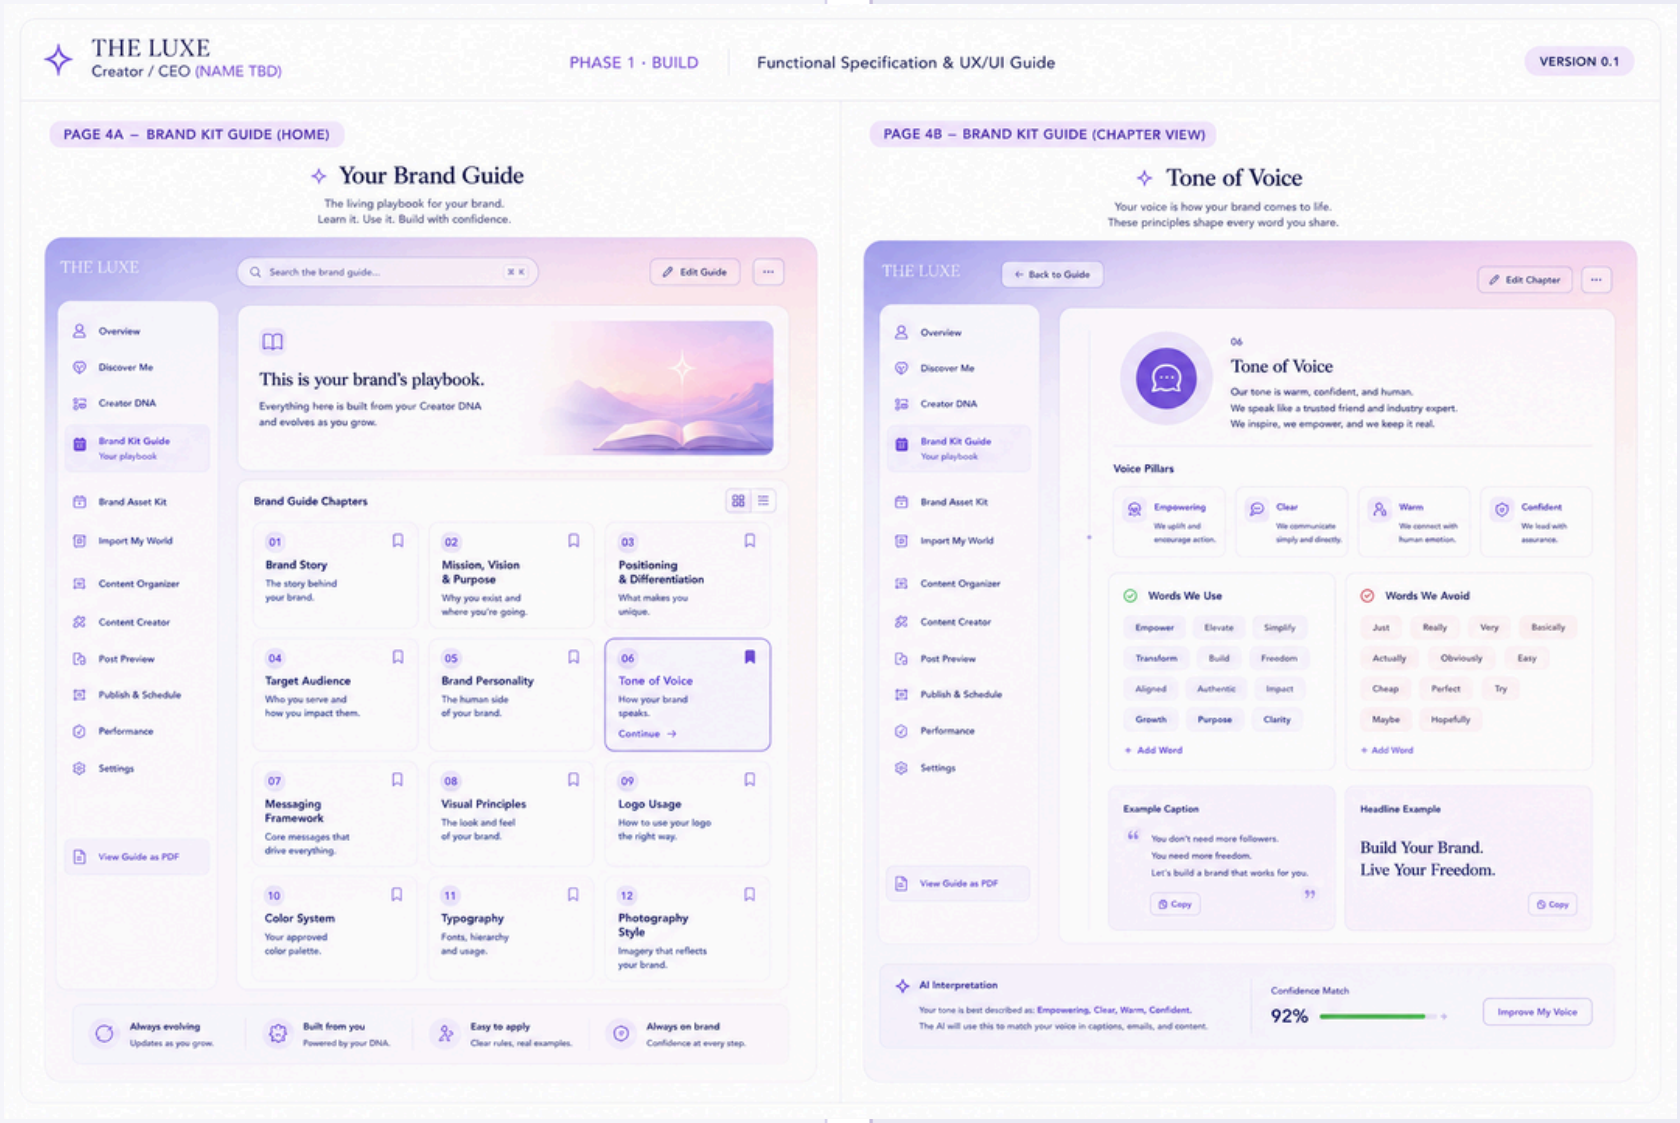


UX / UI MOCKUP

PAGE 4 — Brand Kit Guide

PAGE 4 Brand Kit Guide - 4A&4B

PHASE 1



UX / UI MOCKUP

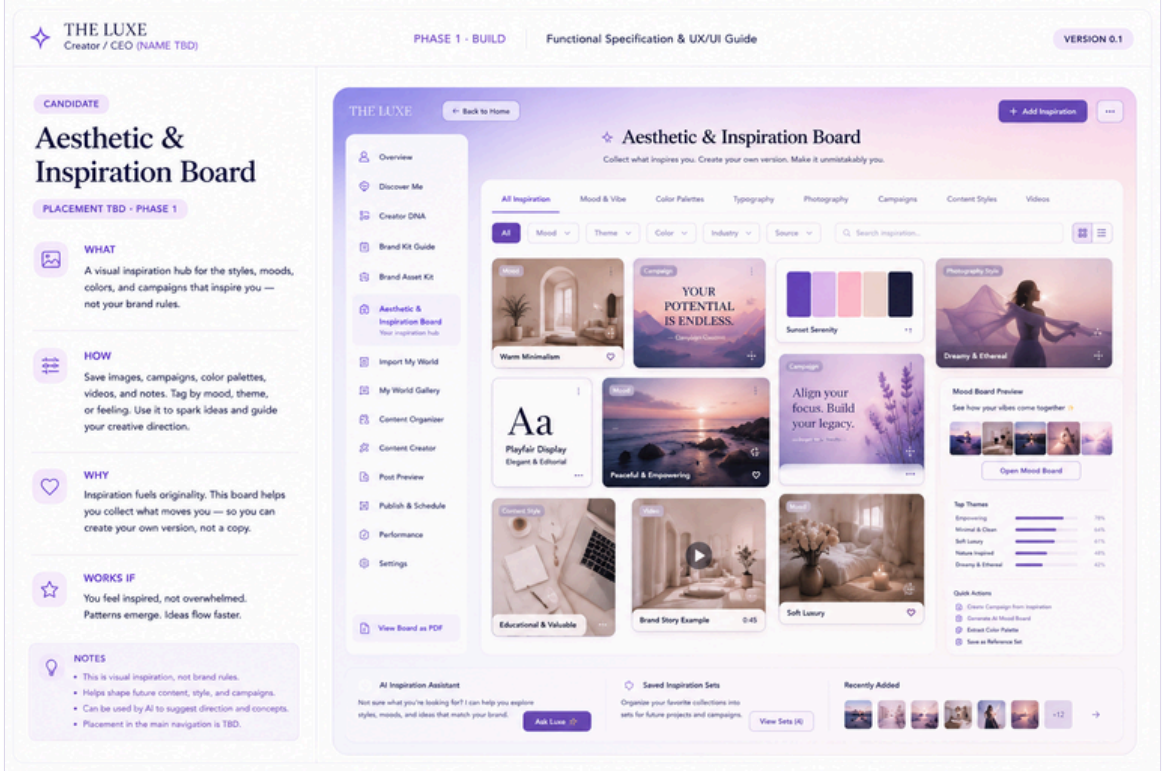
PAGE 4A&B — Brand Kit Guide

CANDIDATE Aesthetic & Inspiration Board

PLACEMENT TBD

What: Images, campaigns, or content styles the creator has been inspired by (e.g. a darker color grade, a moderate-luxury feel), which they add their own unique touch to rather than copy directly.

Status: Flagged as its own candidate page rather than forced into Brand Kit Guide or Brand Asset Kit — this is visual inspiration, not established brand rules. Exactly where this lives is still being decided.



UX / UI MOCKUP

CANDIDATE—Aesthetic&Inspiration Board

PAGE 5 Brand Asset Kit

PHASE 1

What: Colors, fonts, text style, campaign-specific asset sets.

How: Assigned per project/campaign. Partner (e.g. Captions) vs. build in-house still open.

Why: So a creator never re-selects the same assets every single post.

Works if: Assets stay visually consistent across a campaign without manual repetition.

💡 *Logo/watermark placementrules: assign a logo or transparent overlay per campaign or client once, and apply it automatically across every video in that campaign at a consistent placement — same idea extended to caption position, color rules, and similar recurring choices.*

💡 *Template overlays for images (text-over-image, carousel-style graphics) — either via a Canva-style API, or an in-house template library tied to the brand's own assets. The creator sees the image with a template preview over it, picks or adjusts, and keeps fast creative control rather than losing it to automation.*

💡 *Still open: whether assets shift seasonally/per-project or stay static — this isn't just a policy choice, it implies a real underlying system decision too.*

VISION BOARD
Captions Editor
Powered by Captions captions
Professional captions. On-brand.
Fully automated. Fully yours.
WHAT
A powerful captions editor to create, style, and animate captions that perfectly match your brand and voice.
HOW
Auto-generate captions with AI, then edit every word, style, timing, and animation. Save as your brand style for one-click consistency.
WHY
Because your message deserves to be seen, felt, and remembered. Captions increase watch time, engagement, and accessibility.
WORKS IF
You post content. We handle the captions. You stay on-brand. Every time.

For The Future

PAGE 6 Web Content Portal

NEEDS FURTHER DEFINITION

Why this page exists: in the original April call, Sandra actually asked for a full website build — not just structure direction — and there are already real inbound inquiries for this kind of work. A website out of sync with the rest of the brand undermines everything else THE LUXE organizes. This page is the small, first-phase version of that; as it grows, the fuller version becomes its own door into the ecosystem at Level 2 — working name "THE LUXE Web/Sites."

What: A small preview of the creator's live website with a link to it, sitting next to its own organized content space — images and content tagged by campaign, season, or offer, specifically for the website.

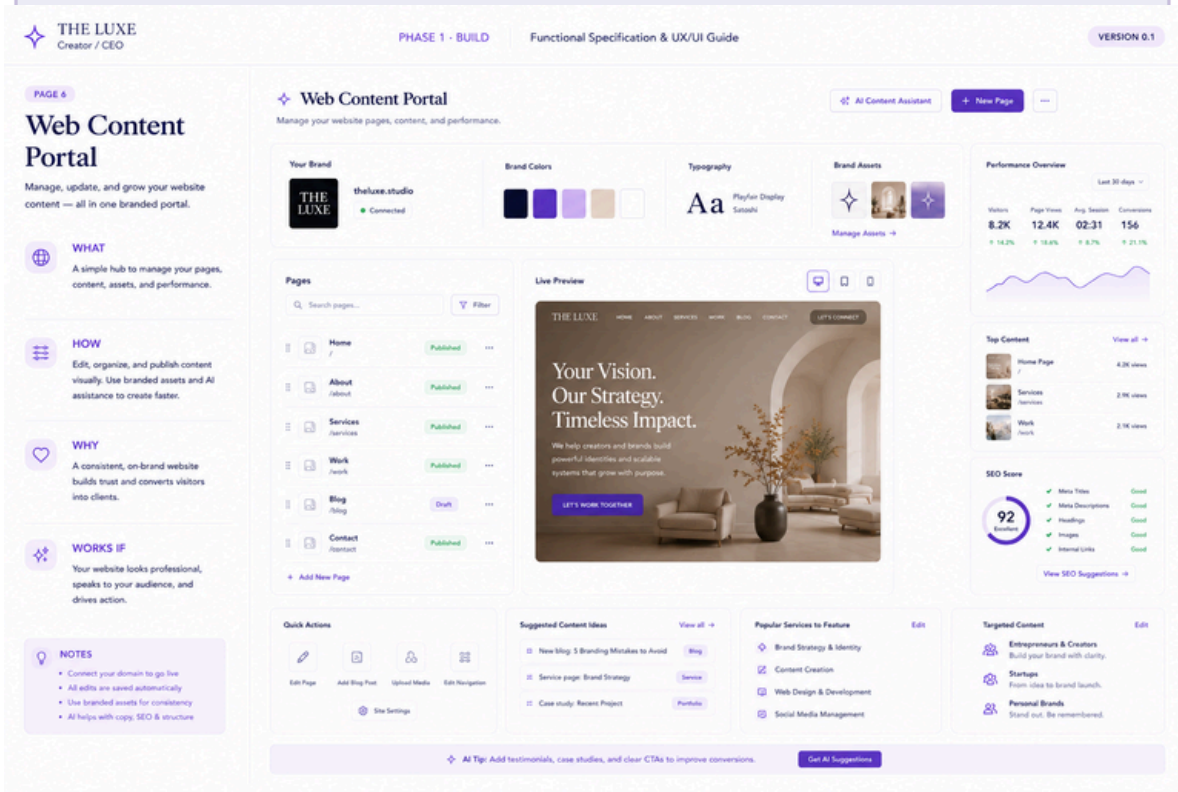
How: The color palette lives here too. Aligned to the same Brand DNA and asset kit as everything else.

Works if: Website-bound content stays as organized as everything else, without needing the live site itself rebuilt yet.

💡 *The deeper piece —auditing anexisting site, generating templates,and pushinglive updates via an API/backdoor connection — stays Phase 2/3, kept deliberately separate so it doesn't become a second build happening at the same time as Creator/CEO's core loop.*

💡 *Still debatable whether offer generation/tracking belongs here in Phase 1, or moves to Phase 2/3.*

💡 *Additional note for later: agency-level users should have the option to get a full web audit and a website built that's congruent with, and built into, the ecosystem itself — this is what eventually feeds the backdoor/API concept above.*



UX / UI MOCKUP

PAGE 6 — Web Content Portal

PAGE 7 Import My World

PHASE 1 — BASIC

What: Pulls in existing assets — Drive, photos, past posts — matched to what's needed.

How: Phase 1: simple — import all, or import by campaign, feeding straight into the Gallery.

Why: Self-Constructing Workspace principle: THE LUXE learns the creator's existing world first, before asking them to build a new system.

Works if: Real material shows up organized, not re-uploaded from scratch.

💡 *Phase 2: smarter sorting — grouping similar piecestogether (by day,by shared context, e.g. recognizing a batch of clips from the same shoot) instead of a flat import. APIs would connect directly so material lands already organized, without a separate manual step.*

💡 *Open question, not yet answered: should this grouping be informed by an assessment from Discover Me? Worth revisiting once Discover Me (Page 2) is fully designed — not decided yet.*

PAGE 7 — Import My World

THE LUXE
Creator OS

PHASE 1 · BUILD | IMPORT MY WORLD FLOW

We prepare the structure.
You connect your world.

1 Welcome to Import My World

We've already built the foundation for you.
Now we'll help you bring in everything that makes it yours.

- Creator DNA created ✓
- Brand Kit generated ✓
- Workspace structure ready ✓
- Content system prepared ✓
- AI Workspace personalized ✓

We did the heavy lifting.
You bring the magic.

Let's Import Your World →

2 We've Prepared Everything

Based on our work together, your creative home is set up and ready for your content.

- Creator DNA — Ready
- Brand Guide — Ready
- Brand Assets — Ready
- Website Connection — Ready
- Content Structure — Ready
- AI Workspace — Ready

One last step...

Connect the places where your work already lives.

- Connect Google Drive
- Connect Notion
- Connect Dropbox
- Connect Social Accounts
- Upload from Device

I'll do this later →

3 Smart Recommendations

Based on our consultation, we recommend importing these key sources first for the biggest impact.

Recommended for you — Why these?

- **Website Content** — Keep your site copy, pages, and structure in one place. — High Impact
- **Brand Photos & Videos** — Organize your media for easy access and reuse. — High Impact
- **Social Content** — Bring in your best-performing posts and assets. — Medium Impact
- **Brand Guidelines** — Ensure brand consistency across everything you create. — High Impact
- **Client Case Studies** — Showcase your work and build trust. — Medium Impact

Estimated time
8 minutes

Start Import →

4 Guided Import

We'll walk you through each connection step by step.
You're always in control.

1. **Connect Source** — Google Drive
2. **Choose Content** — Select folders & files
3. **Organize** — We structure it for you
4. **Review & Confirm** — You approve
5. **Done** — Ready to use

Connect Google Drive

Allow THE LUXE to access your Google Drive so we can import your files.

- Secure connection
- Read-only access
- You control what we import

Connect Google Drive

Learn more about security ›

5 We Organize It For You

Sit back while we sort, categorize, and structure your content automatically.

Organizing your content...
This usually takes 2–5 minutes depending on the size.
72%

- **Smart Categorization** — We place everything in the right spaces.
- **Auto Tagging** — We add tags so you can find it fast.
- **Duplicate Detection** — We keep things clean and remove duplicates.

6 All Set! Your World is Connected

Everything is organized and ready for you to create.

Import Summary

Google Drive	1,241 files
Notion	32 pages
Dropbox	563 files
Instagram	247 posts
Website	45 pages

What's Next?

- Explore your organized content ›
- Create with AI in your workspace ›
- Build, plan, and publish faster ›

Your creative home is ready.
Now go create something iconic.

Go to My Workspace →

too complex

PAGE 8 The Tornado/Torando (Creative Workspace)

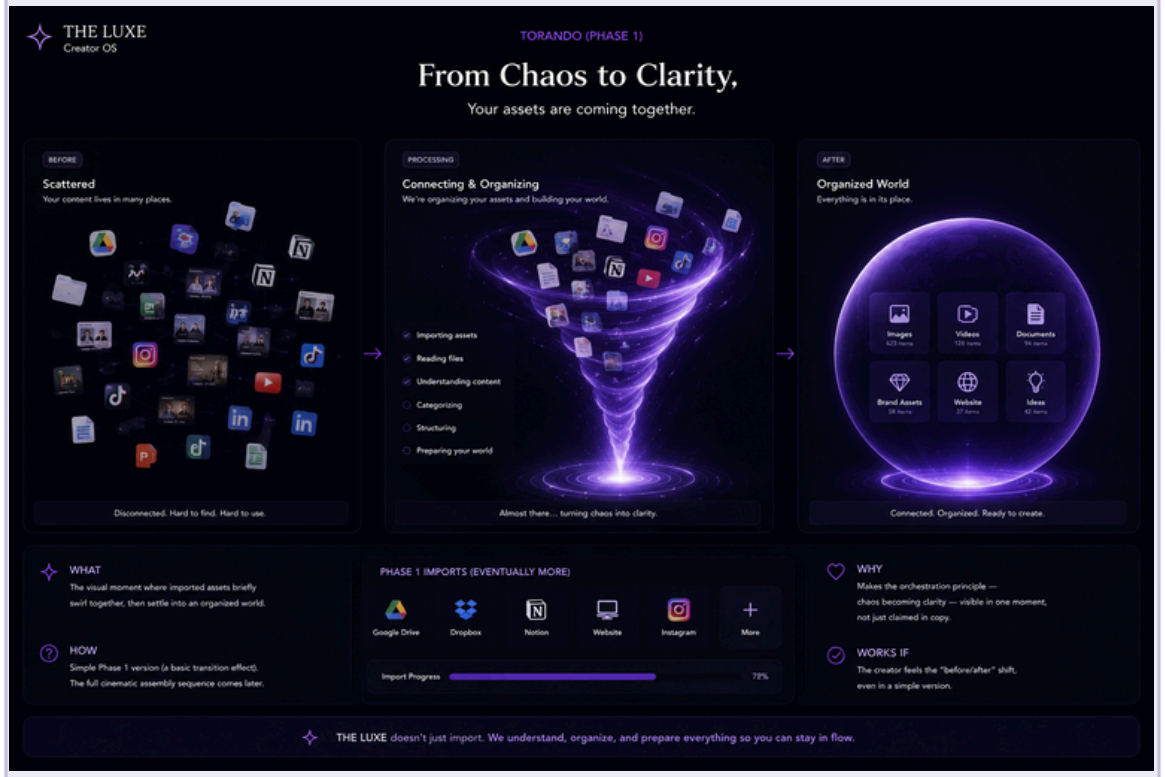
PHASE 1 — SIMPLE VERSION

What: The visual moment where imported assets briefly swirl together, then settle into an organized world.

How: Simple Phase 1 version (a basic transition effect); the full cinematic assembly sequence comes later.

Why: Makes the orchestration principle — chaos becoming clarity — visible in one moment, not just claimed in copy.

Works if: The creator feels the “before/after” shift, even in a simple version.



UX / UI MOCKUP

PAGE 8 — The Tornado

THE LUXE
Creator OS

PHASE 1 · BUILD | From Preparation to Torando (AI Workspace)

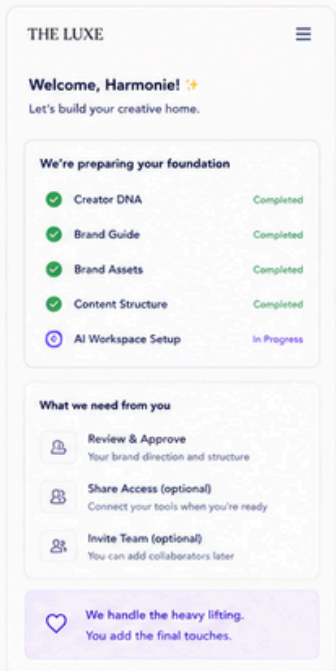
PHASE 1 FLOW

Before Torando → Torando

We prepare the structure. You connect your world. Then you step into Torando — your AI Workspace.

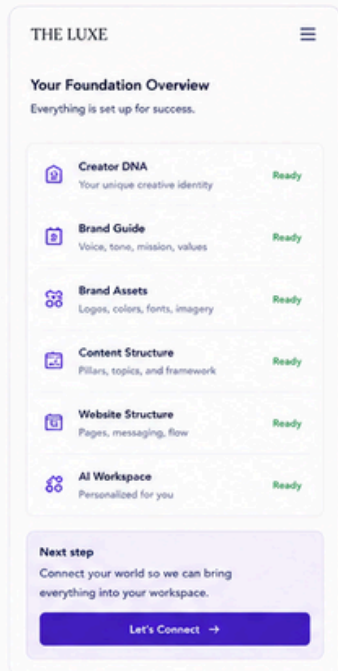
1 We Build the Foundation

We get to know you and build your foundational structure.



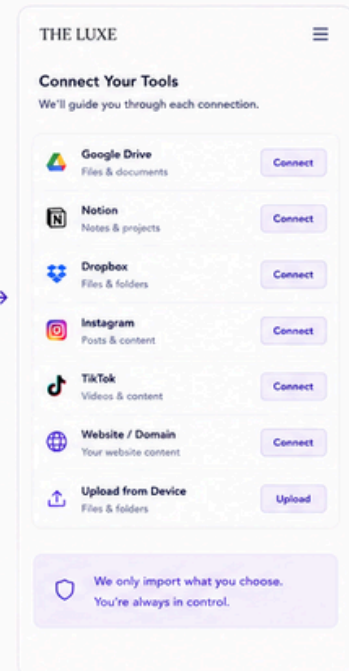
2 Your Structure is Ready

We show you what we've built so you feel confident moving forward.



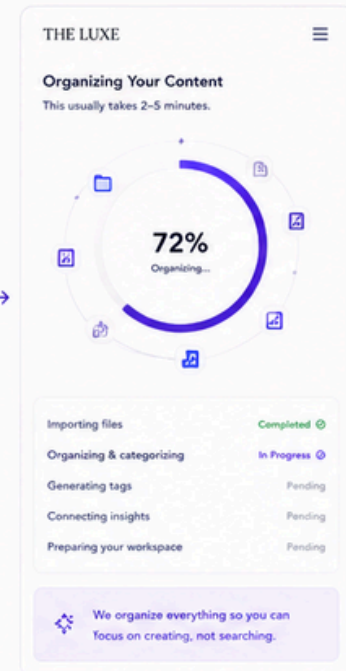
3 Connect Your World

We guide you step-by-step to bring in your tools and content.



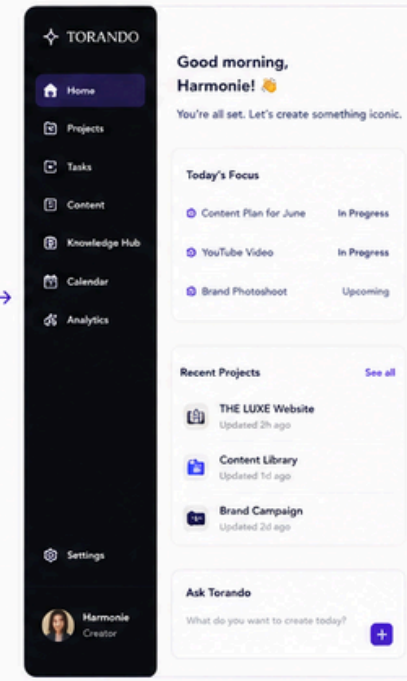
4 We Organize & Prepare

We automatically organize, structure, and prepare everything for your workspace.



5 Torando (AI Workspace)

Your world is connected. Step into Torando — your intelligent creative command center.



The Flow in Phase 1

We don't just connect tools. We prepare the structure, guide you through the process, and deliver an organized workspace that's ready to help you create.

We Prepare

We build your foundation behind the scenes based on what we learn about you.

You Review

You see everything we've built and approve when you're ready.

You Connect

We guide you step-by-step to connect the tools and content you use.

We Organize

We structure, tag, and prepare everything automatically.

You Create

Step into Torando and start creating with clarity, speed, and flow.

Our Promise

We build the structure.
We guide the process.
You stay in flow.

The Luxe Team ♡

THE LUXE
Creator OS

PHASE 1 · BUILD | From Preparation to Torando (AI Workspace)

PHASE 1 FLOW

8A The Tornado

Where everything comes together.

We take everything you've created, connected, and shared with us and transform it into one intelligent, organized workspace.

This isn't just importing. We understand, organize, and prepare everything so you can focus on what matters most — creating.

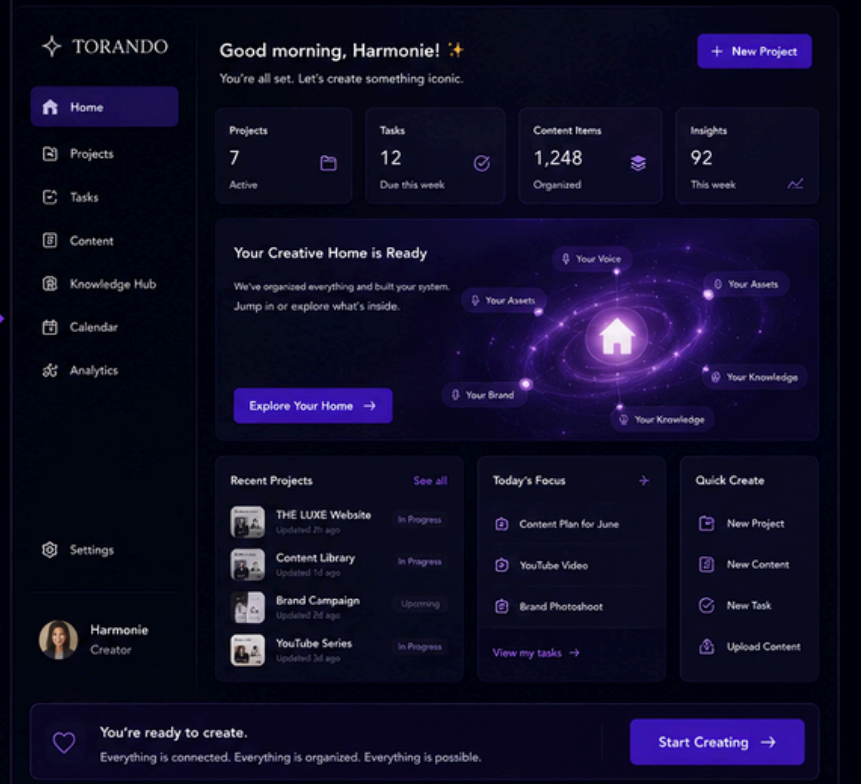
All done in just a few minutes

Usually takes 2–5 minutes

8B Welcome to Torando

Your intelligent creative command center.

Everything is organized, connected, and ready for you to create with clarity, speed, and confidence.



You're ready to create.
Everything is connected. Everything is organized. Everything is possible.

Start Creating →

The Luxe Difference

We Build
We learn about you and build the foundation.

We Guide
We guide you step-by-step to connect your world.

We Organize
We organize, structure, and prepare everything.

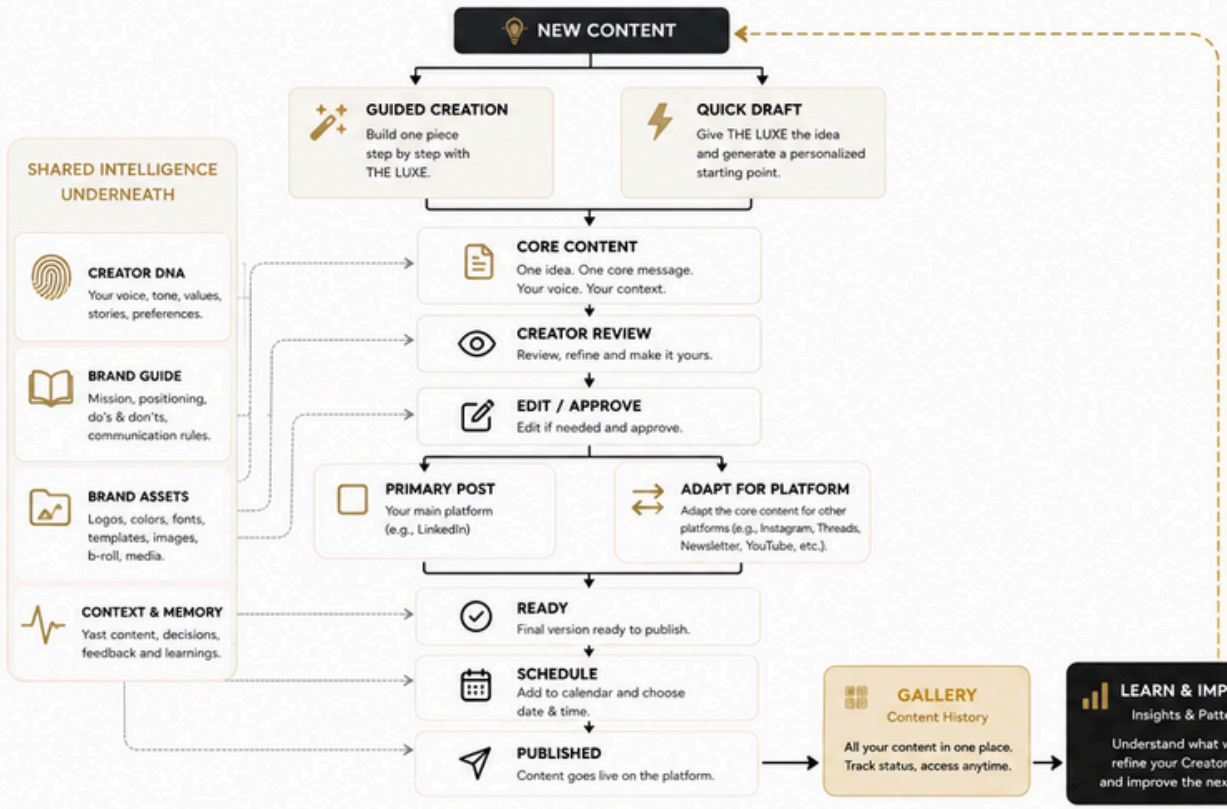
You Create
You step into Torando and create with clarity and flow.

From chaos to clarity.
From scattered to unstoppable.

Welcome home. Let's create. ♡

PHASE 1 ARCHITECTURE

SINGLE-CONTENT ORCHESTRATION LOOP



PHASE 1 PRINCIPLE

Phase 1 validates the smallest complete content loop: **create one piece, refine it with the creator, adapt it where needed, schedule/publish it, preserve it in the Gallery, and use accumulated content history to improve future creation.**

Multi-post campaigns, advanced content planning, recurring pillar systems and deeper analytics expand this loop later rather than being required to prove it.

WHAT THIS MEANS

- We start with one piece of content, end-to-end.
- We reduce creation time while increasing quality and consistency.
- We learn from real published content, not assumptions.
- We build a history that strengthens your Creator DNA over time.
- We create the foundation for future automation and scaling.

PHASE 1 SCOPE (INCLUDED)

- **Single Content Creation** — Guided & Quick Draft
- **Platform Adaptation** — Optimize for multiple platforms
- **Basic Scheduling** — Add to Calendar & Publish
- **Content Gallery** — History, status & access
- **Basic Performance Data** — Reach, engagement, key metrics
- **Creator DNA Learning** — Continuous improvement

FUTURE EXPANSION (NOT IN PHASE 1)

Campaign & Pillar Planning • Intelligent Content Strategy • Recurring Themes
Bulk Creation • Advanced Analytics & Insights • Team Collaboration
On-Demand Production Network (Videographers, Editors, etc.)

PHASE 1
USER JOURNEY
PAGES 9–15

★ **THIS IS PHASE 1.** One piece at a time. Built around you. Designed to learn, so you can grow.

LET'S GROW FOR IT.

PHASE 1

PAGE 9 Content Workspace / Project Pipeline

What: *The central Phase 1 content workspace for taking one piece of content from idea to finished post. The creator can either build the post step by step with THE LUXE, use Quick Draft to generate a personalized first draft from Creator DNA, Brand Guide, existing assets, and a short brief, or bring in an existing idea, asset, link, voice note, or piece of content for THE LUXE to organize and prepare for later.*

How: *Three entry paths, Create With Me, Quick Draft, and Bring Something In, feed into the same underlying content system. Content moves through a simple lifecycle: Idea/Captured → To Create → In Progress → Review → Ready → Schedule/Publish. Existing or finished content can enter later in the flow instead of repeating unnecessary steps. Creator DNA, Brand Guide, Brand Assets, and stored context run underneath every path. Captured ideas can also remain in the work queue until the creator is ready to continue, rather than being automatically scheduled for publishing.*

Why: *This is the smallest sellable loop of the Phase 1 MVP. It directly reduces fragmentation, repeated setup, lost ideas, and excessive editing while keeping the creator in control and creating one consistent place for content to move forward.*

Works if: *A creator can capture or create one real piece of content, move it to publish-ready significantly faster than their current workflow, make fewer repeated corrections, and always understand what the next step is without leaving THE LUXE.*

▼

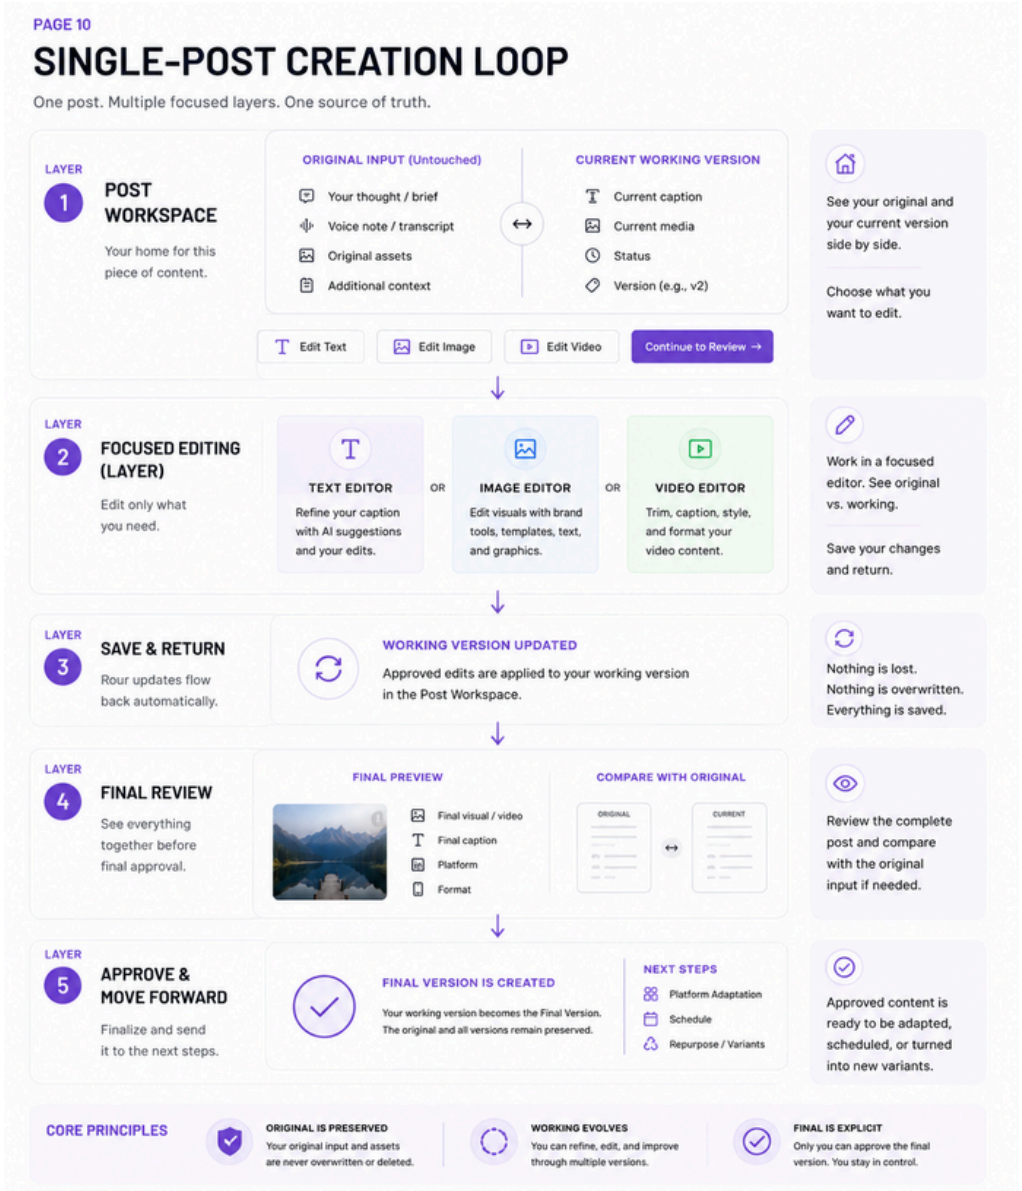
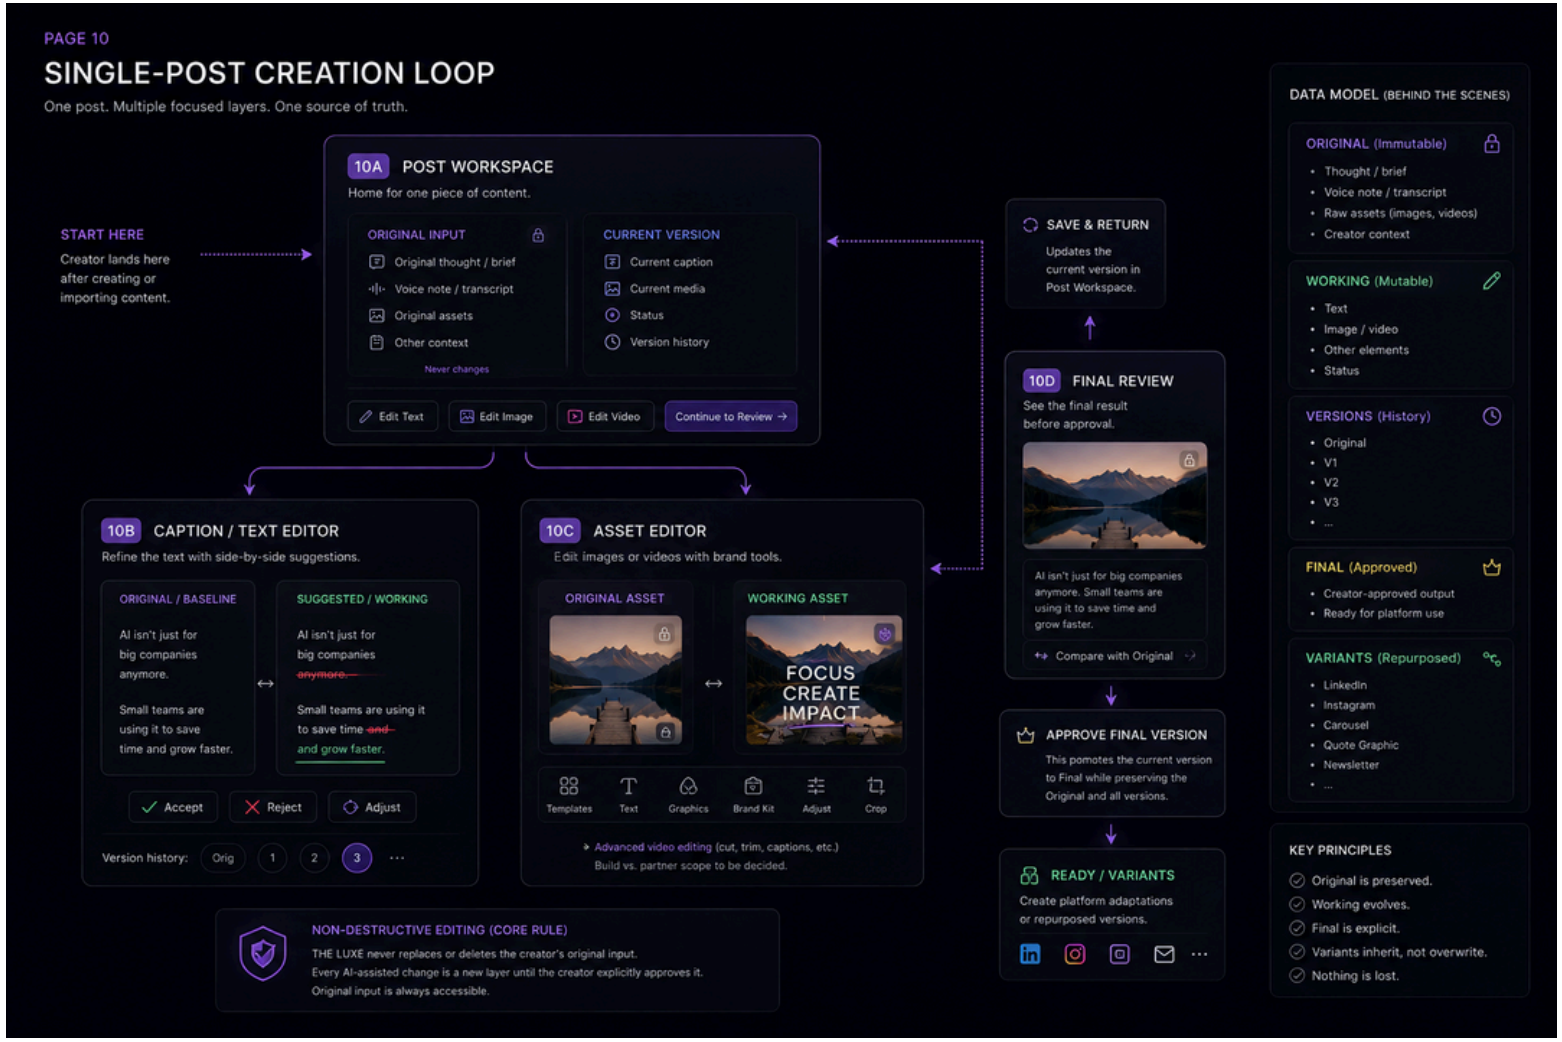
READY / REPURPOSE



One post enters → original is preserved → creator works on a copy → specialized editors open only when needed → changes return to the workspace → creator approves → final version moves forward.

PAGE 10 — User Workflow

The simple step-by-step experience.



Post Workspace → enter a focused editor → save → return to the SAME Post Workspace → potentially edit something else → only then Final Review.

Important: Editing layers temporarily branch out from the Post Workspace. After each edit, the creator returns to the same Post Workspace with the Working Version updated. The Original remains untouched throughout the entire process.

PAGE 10a - Single Post Dashboard

STILL NEEDS DESIGN

PAGE 10A — Single Post Dashboard

What:
The persistent home for one content piece. The Post Dashboard gives the creator a simple overview of the post, its selected assets, current status, timeline, and progress from Idea → Assets → Message → Visual → Review → Ready, without exposing the detailed editing interfaces all at once.
How:
The main post asset stays visually central, with any included carousel assets, video clips, or supporting media directly beside/below it. A simple progress bar shows completed, current, and upcoming stages. Each stage acts as an entry point into its own focused layer. When the creator saves or finishes work inside a layer, they return to this dashboard with the current version automatically updated.
Surface-level utilities such as Copy Text, Original Link, Share Preview, start/target dates, and autosave status remain accessible without displaying the underlying transcript, version history, editing controls, or other detailed information. Those remain one layer deeper.
The same dashboard structure adapts to single-image, carousel/multi-asset, and video posts rather than requiring separate workflows.
Why:
To give every post one clear home and eliminate the need to search across different tools, screens, files, transcripts, and drafts. The creator should always be able to open a post and immediately understand what it is, where it stands, and what to do next, while deeper functionality stays available without creating visual overload.
Works if:
A creator can reopen any in-progress post and, within seconds, understand its current state and continue from the correct next step without searching for files, drafts, captions, or previous work.
UX Principle:
One post. One home. One obvious next step.
The dashboard shows the surface; focused layers handle the complexity.
Phase 1 constraint:
For MVP, prove this dashboard with the single-post workflow first. Multi-post campaigns and more advanced orchestration can build on the same architecture later.

"Single post" refers to one publishable content object, not one individual asset. A single post may contain one image, multiple images (e.g. a carousel), one video, or supporting assets while still remaining one post within the Phase 1 workflow.

UX principle: The Post Dashboard is the persistent home for one post. It surfaces only the post, selected assets, progress, current stage and essential actions. Each workflow step opens its own focused layer and returns here when saved. The interface may later inherit visual accents from the creator's Brand Kit.

PAGE 10B — MESSAGE EDITOR SPEC

WHAT

The Message Editor flow allows creators to write, speak, and refine the core message of their post with AI assistance. It includes a simple entry layer for speed and an advanced editor for deeper optimization and version control.

HOW

1. Creators enter the Message stage from the Post Dashboard.
2. In the simple Message Layer, they can type or record their message.
3. To refine further, they open the Advanced Text Editor.
4. The editor shows Original vs AI Suggested side-by-side with version control and AI refinement tools.
5. Creators accept, reject, or adjust the AI suggestions.
6. The finalized message is saved as the current version and returned to the Post Dashboard.

KEY ELEMENTS

- Message input (type or voice)
- Record voice note (transcription to text)
- Open Text Editor (enters advanced mode)
- Original vs AI Suggested comparison
- Version control (V1, V2, V3....)
- AI refinement tools (Improve Hook, Shorten, More Like Me, Platform Optimize)
- Accept / Reject / Adjust / Show edits
- Save Draft & Auto-save
- Finalize and return to Dashboard

WHY

Gives creators flexibility and control—whether they want a fast caption or a powerful AI-assisted refinement—while keeping everything organized and versioned.

WORKS IF

A creator can move from a raw idea to a refined, confident message in minutes, with full control and the ability to return to previous versions.

PHASE 1 CONSTRAINT

Focus on single-post message editing. Advanced features like multi-post campaigns, team collaboration, and campaign-level orchestration will come in later phases.

Have an idea right now?
Tap to capture anything.

Sandra
Agency Founder

Hey Sandra! 👋

Help Me Plan | + Capture Anything

Let's turn your ideas into *impact.*

We'll guide you from idea to results—one step at a time.

1. **Capture Idea** — Dump it all out. I'll organize it.
2. **Shape It** — Define the angle and what it's for.
3. **Create** — I'll help you build the content.
4. **Plan & Publish** — We'll schedule it and get it out there.

Complete! Get your game plan and see what's working.

STEP 1 OF 4

Capture your idea

Say it, type it, paste it, or upload it.
I'll take care of the rest.

What's on your mind?

Tap to speak | Capture It

Your Next Up
The best thing to work on right now.

You're building something amazing.
Keep going, we've got your back.
THE LUXE is learning your patterns to give you smarter recommendations.
See what we're learning

THE LUXE ✦
PHASE 1 SYSTEM MAP

One intelligent system. One continuous loop.
From idea to impact and back again.

HOW IT WORKS

THE LUXE remembers your context across every step and every cycle.

It connects the dots between your content, your audience and your business goals.

It helps you focus on what creates real impact without losing your voice.

Every cycle adds clarity, strengthens your patterns and compounds your results.

KEY OUTCOME

More meaningful outcomes.
Less busywork.
Stronger brand. Sustainable growth.

THE LUXE INTELLIGENCE LAYER

CONTEXT MEMORY
Goals, past decisions, content, feedback.

CREATOR DNA
Your voice, tone, values, preferences.

DECISION DATA
What you choose, approve and change.

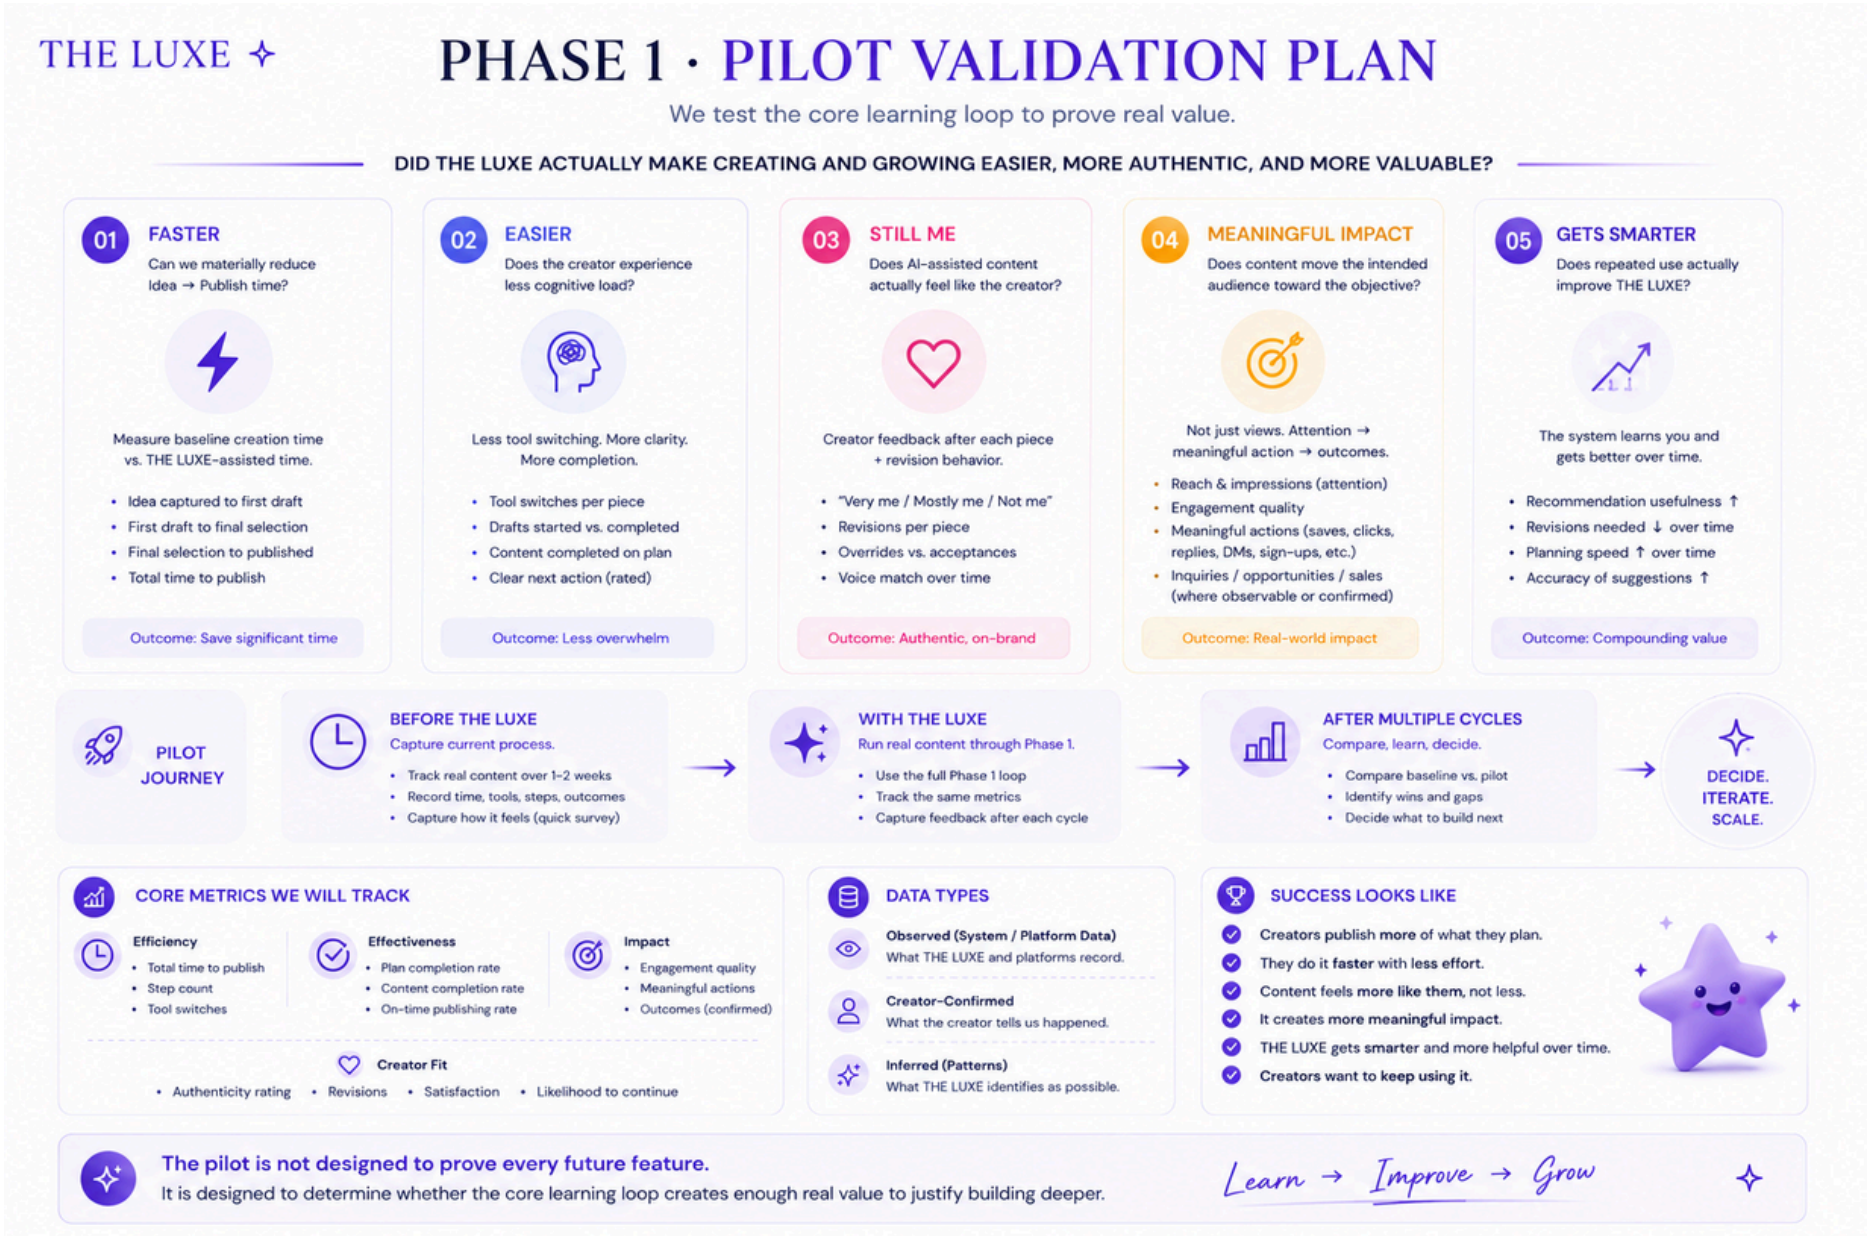
KNOWLEDGE HUB
Your assets, insights and conversations.

LEARNINGS ENGINE
Patterns, insights and recommendations.

PRIVACY BY DESIGN
Your data is yours. You stay in control.

✦ Every cycle adds context. Every cycle makes the next one smarter.

PHASE 1 PILOT VALIDATION



PAGE 10a Single-Post / Asset Editor — Layer 1

STILL NEEDS DESIGN

What: The Detail/Finalize view. Does NOT edit the video or image — shows the final title, the current caption, and other post details, and holds the different caption versions for reference.

How: When the creator needs to narrow down the actual wording, this opens the Caption/Text Editor (Page 11). Once confirmed there, it flows back automatically and updates here — no manual sync step.

Why: Gives a single place to see exactly where a post currently stands.

Works if: The creator always knows which version is current without hunting for it.

PAGE 10b Single-Post / Asset Editor — Layer 2

STILL NEEDS DESIGN

What: The Generate/Edit layer — where assets, text, effects, and captions actually get added or changed.

How: Needs a real build-vs-partner decision: build in-house, or integrate something like Captions or CapCut.

Why: The Content Workspace can't function without this underneath it.

Works if: TBD once the build-vs-partner decision is made.

💡 *Worth realresearch beforethis gets built: talking to actual YouTube and Instagram specialists, and creators whose content has grown substantially, about what specifically made the difference for them — plus the psychology of what creates real impact, drives conversion, and improves CTA performance. Not done yet, just flagged as necessary.*

UX / UI MOCKUP

PAGE 10b —Single-Post/AssetEditor — Layer 2

PAGE 11 Caption / Text Editor

PHASE 1

What: Opens from Layer 1 when narrowing down text specifically. The image or video shows above, with a description — for video, the pulled transcript. Below that, two boxes side by side: the current caption on the left, a suggested edit on the right, shown with strikethrough for removals and additions marked.

How: A popup lets the creator accept, reject, or request an alternative for each suggested change; accepted changes update the right box. Once happy, “finalize” replaces the left box — that becomes the new baseline. If they later decide it's not actually final, clicking edit again reopens this same page, lands back in the left box, and they describe or type what to change — the right box responds with new suggestions, and the loop repeats.

Version history: shown as small numbered circles above the left box — 1, 2, 3 — not endless scrolling. Clicking one returns to that version as the new starting point for further edits. Right before publishing, whatever's in the left box flows back to Layer 1 automatically.

Works if: She can adjust one sentence without losing or re-finding the rest — this is Sandra's exact 2-hour pain point, solved directly.

💡 *Worth adding: an optional template-suggestion popupbased on real post structure (hook → context → reasoning → resolution → CTA) — restructures a draft into that shape as a starting option the creator can accept or ignore, not a requirement.*

💡 *Open question, not yet settled: whether a video's transcript is pulled and shown here, or lives instead in Layer 1 of the Single-Post Editor.*

UX / UI MOCKUP

PAGE 11 — Caption / Text Editor

PAGE 12 Gallery

STILL NEEDS DESIGN

What: Where existing assets live, sorted into campaign/category/project — finished pieces and raw/in-progress items alike.

How: Layout not designed yet. Every asset gets a shareable link — while unreleased, it's view-only (like watching a hosted video, not downloadable), so a teammate can review and approve without being able to take the file. Once the creator explicitly releases/unlocks it, download becomes possible.

Why: Confirmed core infrastructure. The view-then-release distinction protects work in progress while still making review effortless.

Works if: Someone can review a piece instantly without downloading it, and only gets the actual file once it's genuinely ready.

UX / UI MOCKUP

PAGE 12 — Gallery

PAGE 13 Idea Box

PHASE 1

What: Both a checklist and a visual space map — sticky notes, campaign titles, zoomable into a storyboard, searchable.

How: Fast capture, not stored inside active campaign work — links back into starting an edit or project when ready.

Why: So ideas never get lost, without cluttering active work.

Works if: A thought captured in passing is easy to find and act on later.

💡 *Organized by progress level, the same way the Content Workspacepipeline is — when an idea gets acted on, it moves out of the box and into its proper stage.*

💡 *Later addition: pulling ideas that align with existing pillars, and pushing an idea straight into production — creating a real piece and placing it on the calendar directly from here.*

UX / UI MOCKUP

PAGE 13 — Idea Box

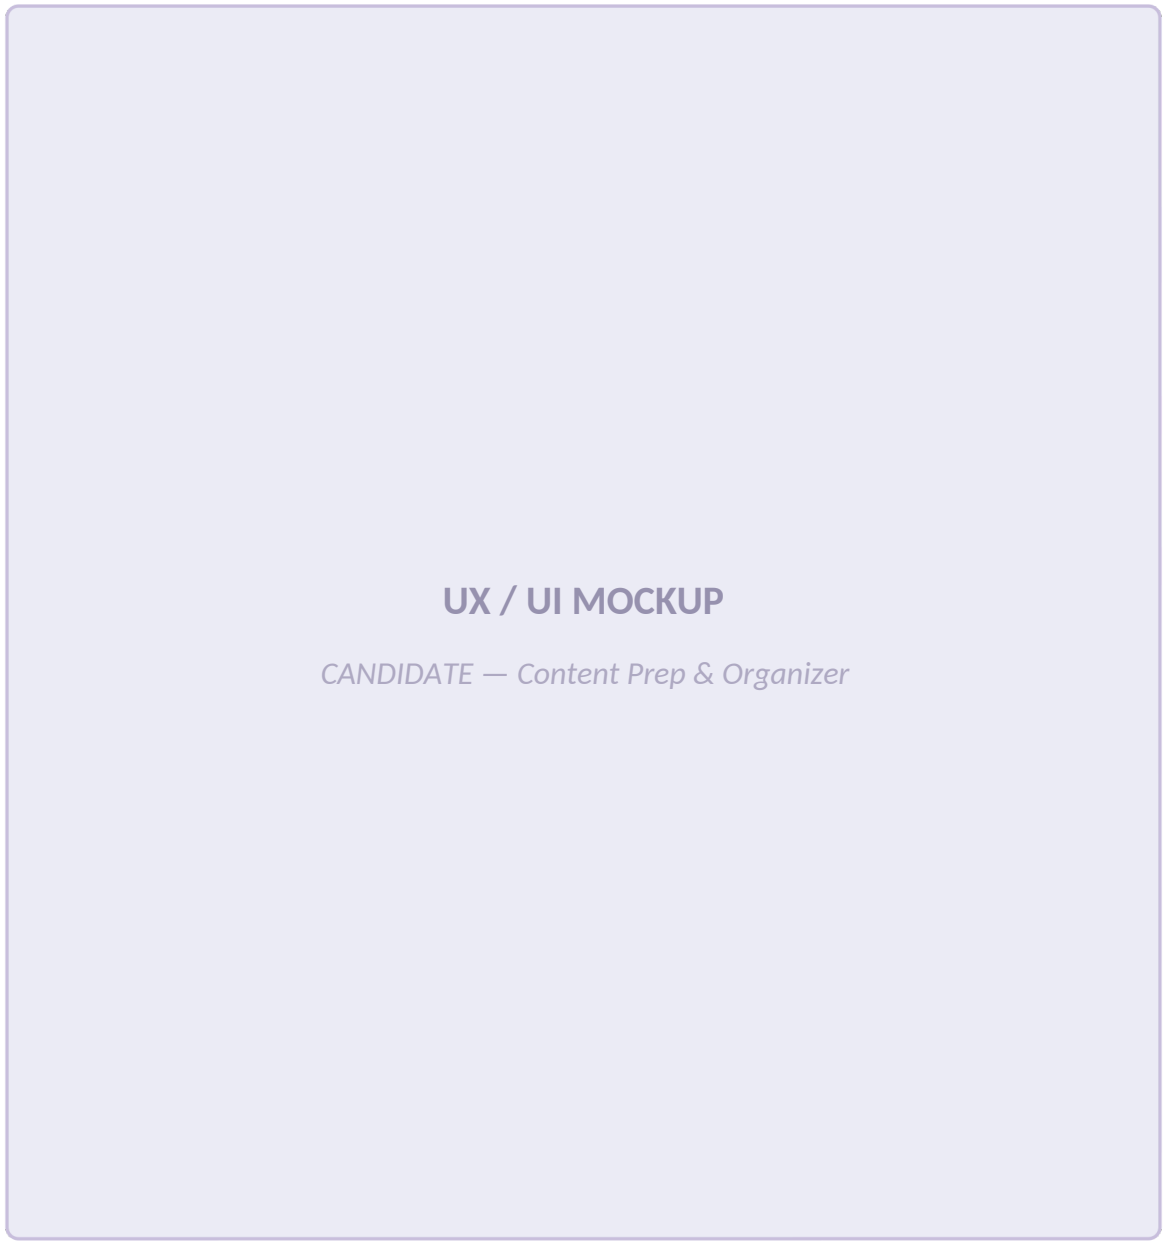
CANDIDATE Content Prep & Organizer

PLACEMENT TBD

Confirmed useful: real shoots are already being planned with Sandra. A simple checklist: supplies, team, dates, location, everything needed for a shoot or piece of content, finalized into the calendar once complete. Needs a clean, pleasant display, not just a plain form.

Reusable data: each entry (a supply, a location, a team member) saves into its own reusable list — essentially a lightweight contacts/supplies/inventory database — so a new campaign or project surfaces those same options as quick picks. Some of this may already be pullable directly from the Brand Kit.

Phase 2: API task-activation — automatically emailing collaborators, sending scripts, notifying people needed for a shoot — stays Phase 2. The checklist/organizer itself is the Phase 1 piece.



PLACEMENT TBD

Content Prep & Organizer — the Three Screens for This Page

Overview

UX / UI
MOCKUP
Add items

UX / UI
MOCKUP
Finalized checklist

PAGE 14 Platform Selection & Publish Routing

PHASE 1

What: Choosing which platform(s) a piece goes to, formatted for each.

How: LinkedIn-first dashboard for Sandra. Traffic-light status system (green/yellow/red).

Why: Confirmed core, needed from day one.

Works if: A piece reaches the right platform, correctly formatted, without manual reformatting.

💡 *Direct platform posting — meaning: publishing straightfrom inside THE LUXE directly to LinkedIn, Instagram, etc., without the creator having to first download the finished file out of THE LUXE and then manually re-upload it themselves on each platform. That would save real time, but it's a real technical barrier that needs a direct conversation with Mario — not assumed to be feasible yet.*

💡 *Phase 1's actual objective, stated plainly: focus only on videos under 30 seconds, plus images, for LinkedIn specifically, for Sandra. Because that's already the format being built, it makes sense to also build the underlying capability to support TikTok, YouTube Shorts, and Instagram formatting as a near-term second stage — even though Sandra herself stays LinkedIn-only for her actual pilot. That extra capability would be built and tested internally in parallel, not deployed to her.*

UX / UI MOCKUP

PAGE 14 —PlatformSelection&Publish Routing

PAGE 15 Creator Dashboard

PHASE 1

What: Overview of projects, content, tasks, calendar, performance insights.

How: Version history as visual bubbles, checkmark on the selected final version.

Why: One home base instead of switching between disconnected tools.

Works if: The creator can answer “where do things stand” without opening five other apps.

💡 *Further considerations tolayer on top, not a redesign: day/week/month views; daily focus points aligned with real time, timezone, and schedule; reminders and time blocks tied to known events (e.g. an actual shoot time); duration tracking (scripting time, time-to-post); visible growth tracking per page/post; a transcript-recording feature.*

UX / UI MOCKUP

PAGE 15 — Creator Dashboard

Part Two

Later phases, open questions, and next steps

Identity Protection

Verification layer for face-containing posts

Confirm content is genuinely the person's own before it can be used or generated — similar to Hinge/Bumble-style verification. Protects against unauthorized AI generation of someone's likeness. Needs further research before this becomes a real spec.

No full face reconstruction, ever

Unlike ChatGPT's tendency to regenerate an entire face — edits stay limited to light cleanup/glamour, color, and text. Worth researching whether Claude handles this more conservatively than ChatGPT does. Adobe Suite partnership vs. an in-house editor still open.

Both the compliance review layer and this identity-verification piece are flagged deliberately, not built as pages yet — both are later-stage.

TWO DISTINCT, DEFERRED IDEAS

Library & Inspiration

Personal inspiration library

Books, quotes, campaigns, aspirational references — things that represent who the creator is or is becoming, not their own work. Always-visible, organized board. Distinct from the Aesthetic & Inspiration Board — that one is visual style, this one is personal meaning.

“Operating under the principles of highly successful people”

Still just a walking idea, not a finalized feature. No integration mechanism decided. If it happens at all, it lives here as optional inspiration only — zero influence on the creator's actual DNA or output.

PROPOSED, NOT YET BUILT

Phase 2

- Long-form video editing hub (up to 3 minutes), decoupled from the caption/text side.
- Photoshoot coordination.
- Compliance review layer — the specific depth EXIST asked for.
- API task-activation for the Content Prep page.

DEFERRED — THE AUTOMATE LAYER

Phase 3

- FullDiscover Me animation, full Rooms vision, Today's Mission, Deep Work Mode, milestone tracking, Creator Teams, monetization features.
- Vacation Mode / Personal Mode — documenting life moments (e.g. while traveling) that get turned into posts later, so they aren't lost.

★ **GOLDEN STAR**

Revolutionizing long-form video editing (up to ~30 minutes) — if this gets solved, it's one of THE LUXE's biggest possible differentiators. Worth including explicitly in the EXIST application and the big-rectangle vision.

Scoped Specifically for Sandra

This pagecoversproductscopingonly.Thebrandconsultation,finalpricing,and full needs-mapping live in the separate Sandra Cross-Reference document, built next.

Phase 1 focuses on organizing images and videos under 30 seconds — the manageable starting point. From there, video length can expand to 3 minutes, then further down the road.

- LinkedIn only — staying specific and mastering one platform, rather than spreading the pilot thin.
- Built from assets she already has.
- Timer/milestones/calendar added later, based on how she actually works.

💡 *Testing idea: even while Sandra stays LinkedIn-only, the same 30-second video could be tested internally on YouTube Shorts, TikTok, and Instagram to see how performance and the right approach differ by platform — feeding directly into Platform Selection's per-platform customization.*

💡 *Worth noting: Harmonie's own consulting Blueprint package was already selling pieces of this manually, under different terms, before any software existed. As Sandra's actual offer gets finalized, pricing should be reconsidered against those existing tiers — see Open Decisions.*

Testing Whether Creator DNA Works

Self-recognition test

Already built intotheBible's own Approval Loop concept: when Sandra sees her generated DNA profile, does she say “yes, that's me” without heavy editing, or does she need to fight it? That reaction is the correctness signal.

Reduced-correction test

Does content generatedfromtheDNA profile need fewer edits over time, or does she keep making the same corrections every session? If the same fix keeps happening, the DNA isn't capturing that trait yet.

Blind-prediction test

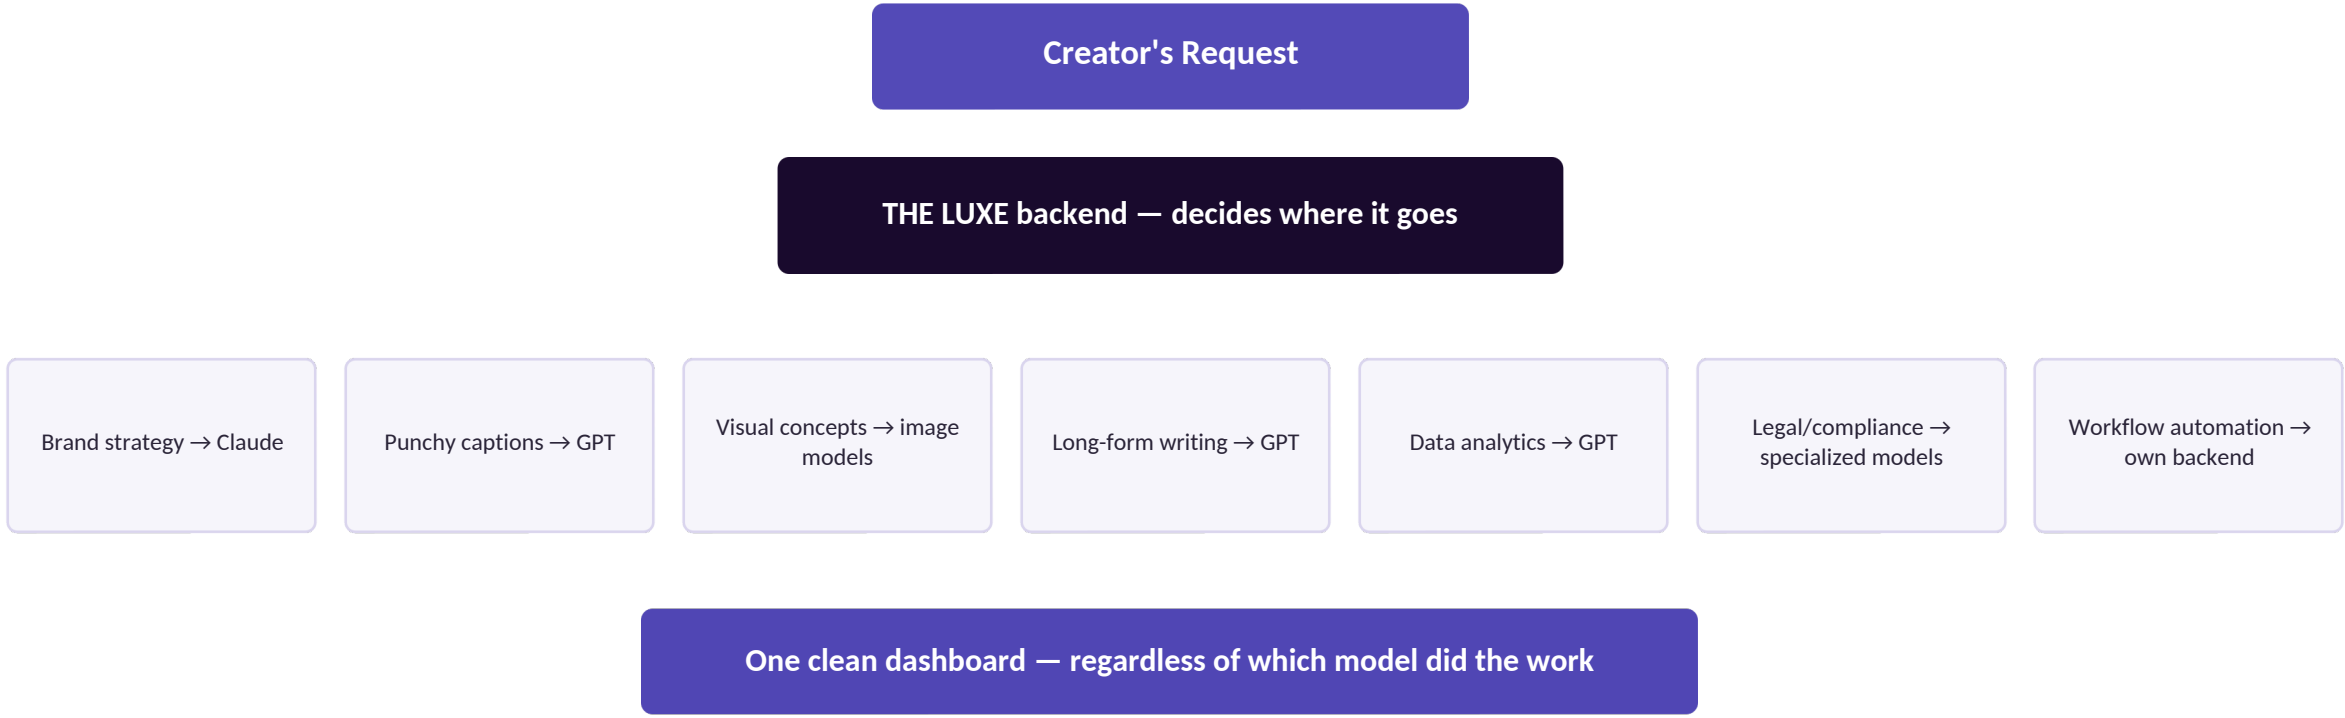
Could someone who'sonly read her DNA profile (not met her) correctly guess how she'd react to a given post idea? That's a real validity check, not a vibe.

Historical-match test

Does DNA-driven output actually sound like her existing real posts, side by side? She has real posts already — this is directly testable now, not theoretical.

Orchestration Routing

Whatthis shows:whena creator doessomething inside THELUXE, the request doesn't go to one single AI model. THE LUXE's own backend looks at what kind of task it is, androutes ittowhichever model isactuallybest suited forthatspecific task — the creator never sees this happen, they just see one clean dashboard.



Still genuinely open, not a locked decision: whether to build THE LUXE's own AI system from scratch, or route to these named external models (Claude, GPT, and specialized image/legal models) as shown above. This needs a real discussion with Mario, alongside the separate question of how the API/import connections themselves get built.

TO WORK THROUGH OVER TIME — NOT MEETING-BLOCKERS

Open Decisions

Thesearerealdecisionsthatshouldn'tbeforgotten, but get worked through over time, not all at once. Priority is a starting opinion, not a final ranking.

○	HIGH	Single-brand-voice vs. multi-brand-voice at launch — a real debate, not yet resolved: can one account hold only one brand voice, or does a person (or an agency, managing several clients) need to run multiple distinct voices at once under one login? A deeper technical question than it first sounds.
○	HIGH	Layer 2 of the Single-Post/Asset Editor (Page 10b): build in-house vs. partner with something like Captions or CapCut — the page can't move forward without this.
○	MEDIUM	Brand Asset Kit: partner vs. build in-house — still needs to be further thought out and researched.
○	MEDIUM	The Ideas-vs-Pillars question from Page 9, and the campaign-level overview question — both need real discussion.

CONTINUED — CAN WAIT / NOT YET DETERMINED

Open Decisions

MEDIUM	CreatorDNAfield research: psychological/marketing basis for individual specificity — still needs to be further thought out and researched.
CAN WAIT	Sandra's pricing: the €700/750 agency rate was a rough, early estimate from before the actual scope was defined — written down at mind-map stage, before this deck existed. It needs to be renegotiated and aligned with the current Blueprint / Architecture / Oracle tiers. The final number is very likely higher than originally quoted.
CAN WAIT	“Voice Integrity Score” has no definition yet.
CAN WAIT	Pre-revenue strategy: beta clients/income while building, or build-first?
CAN WAIT	Identity verification layer and no-face-reconstruction: both still need to be further thought out and researched before becoming real specs.
CAN WAIT	Whether Rooms are one shared concept across all applications, or each application gets its own distinct Rooms concept — still needs to be further thought out.
—	Hosting & backend visibility: how do we track things on the back end — for one, to predict and see how many users we have overall, in our own dashboard. And separately, for the agency tier: if we're managing a set number of clients directly, with different people needing different types of access, what does that actually look like? A deeper architecture question for a real conversation with Mario, not answered here.

Next Actions

- Walk this deck with Mario directly.
- Fill in the mockup slots as each page's design is finalized.
- Design the still-missing pages: Single-Post Editor (both layers), Gallery, Discover Me's three screens.
- Decide placement for the two candidate pages.
- Build against the confirmed Phase 1 list, one page fully finished before the next starts.
- Build the separate Sandra Cross-Reference document next.

Color Key & Indicators

Teal
Something worth flagging or considering, not yet fully decided. Everything else = already confirmed.

Lightbulb
An idea or consideration worth thinking about — not built yet, not necessarily happening, just worth having on record.

Golden star
A standout opportunity — something that could become a major differentiator if it gets solved.

Hollow circle
Used on the Open Decisions slides — marks something still genuinely open.

PHASE 1

PAGE 9 Content Workspace / Project Pipeline

What: Per-asset workspace — each post/video gets its own space. Pipeline: Ideas → Scripting → Filming → Editing → Review → Done.

How: Brief → Generate → Approve/Edit → Finalize → Schedule. Brand Voice DNA runs underneath every piece. A path exists for already-finished content (premade videos/images) to skip straight past the earlier stages instead of being forced through them.

Why: The actual, sellable Phase 1 offer — solves fragmentation and produces genuinely voice-matched content.

Works if: A post moves start to finish on this page, in meaningfully less than the ~2 hours it currently takes Sandra.

SAVE it FOR LATER

UX / UI MOCKUP

PAGE 9 — ContentWorkspace/Project Pipeline

💡 *A real, unresolved question: how do ideas relate to the brand's pillars? Proposed shape — two layers. A pillar-guided layer that builds a schedule (e.g. Monday/Wednesday/Friday themes) and guides the creator within it, and a separate freestyle layer for extra pieces outside that schedule, which still gets guided to a finished result. Needs real discussion with Mario, not decided here.*

💡 *A fast "auto-draft" option is worth considering: something that generates a quick draft using the Brand Kit and DNA rules, purely to speed up the starting point — never final, always requiring the creator's review, edits, and explicit approval before anything moves forward. This follows the same approval pattern already used everywhere else, so it doesn't work against the Creator-First philosophy as long as it never skips the approval step.*

💡 *Also still open: whether a full campaign (e.g. 12 videos) needs its own overview separate from an individual post's workspace — possibly a Gallery feature instead. Not yet decided.*

PHASE 1

PAGE 9 Content Workspace / Project Pipeline

WHAT: THE CENTRAL PHASE 1 CONTENT WORKSPACE FOR TAKING ONE PIECE OF CONTENT FROM IDEA TO FINISHED POST. THE CREATOR CAN EITHER BUILD THE POST STEP BY STEP WITH THE LUXE OR USE QUICK CREATE TO GENERATE A PERSONALIZED FIRST DRAFT FROM CREATOR DNA, BRAND GUIDE, EXISTING ASSETS, AND A SHORT BRIEF.
HOW: TWO ENTRY PATHS, CREATE WITH ME AND QUICK CREATE, MERGE INTO THE SAME WORKFLOW: IDEA → DRAFT → REVIEW → READY → SCHEDULE/PUBLISH. EXISTING FINISHED CONTENT CAN ENTER LATER IN THE FLOW INSTEAD OF REPEATING UNNECESSARY STEPS. CREATOR DNA AND BRAND VOICE RULES RUN UNDERNEATH BOTH PATHS.
WHY: THIS IS THE SMALLEST SELLABLE LOOP OF THE PHASE 1 MVP. IT DIRECTLY REDUCES FRAGMENTATION, REPEATED SETUP, AND EXCESSIVE EDITING WHILE KEEPING THE CREATOR IN CONTROL.
WORKS IF: A CREATOR CAN MOVE ONE REAL PIECE OF CONTENT FROM IDEA TO PUBLISH-READY SIGNIFICANTLY FASTER THAN THEIR CURRENT WORKFLOW, WITH FEWER CORRECTIONS AND WITHOUT LEAVING THE LUXE.

💡 *A real, unresolved question: how do ideas relate to the brand's pillars? Proposed shape — two layers. A pillar-guided layer that builds a schedule (e.g. Monday/Wednesday/Friday themes) and guides the creator within it, and a separate freestyle layer for extra pieces outside that schedule, which still gets guided to a finished result. Needs real discussion with Mario, not decided here.*

💡 *A fast "auto-draft" option is worth considering: something that generates a quick draft using the Brand Kit and DNA rules, purely to speed up the starting point — never final, always requiring the creator's review, edits, and explicit approval before anything moves forward. This follows the same approval pattern already used everywhere else, so it doesn't work against the Creator-First philosophy as long as it never skips the approval step.*

💡 *Also still open: whether a full campaign (e.g. 12 videos) needs its own overview separate from an individual post's workspace — possibly a Gallery feature instead. Not yet decided.*
